

Testing for Objections

- If you have a reason you cannot live with one of these codecs that has not already been discussed, can you explain it now?

Consensus Call

1. If you support H.264 as the mandatory to implement codec or are willing to live with it as the MTI, please raise your hand now.
2. If you support VP8 as the mandatory to implement codec or are willing to live with it as the MTI, please raise your hand now.

You may raise your hand more than once and we encourage you to do so if you can live with either, even if you have a preference for one over the other.
