Abstract

The IETF policies about Intellectual Property Rights (IPR), such as patent rights, relative to technologies developed in the IETF are designed to ensure that IETF working groups and participants have as much information about any IPR constraints on a technical proposal as possible. The policies are intended to benefit the Internet community and the public at large, while respecting the legitimate rights of IPR holders. This memo details the IETF policies concerning IPR related to technology worked on within the IETF. It also describes the objectives that the policies are designed to meet. This memo updates RFC 2026 and obsoletes RFC 3979 and RFC 4879.

Status of this Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at http://datatracker.ietf.org/drafts/current/.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on April 11, 2014.

Table of Contents
[tbd]
1. Definitions

The following definitions are for terms used in the context of this document. Other terms, including "IESG," "ISOC," "IAB," and "RFC Editor," are defined in [RFC2028].

a. "Alternate Stream": the IAB Document Stream, the IRTF Document Stream and the Independent Submission Stream, each as defined in Section 5.1 of [RFC4844].

b. "Contribution": any submission to the IETF intended by the Contributor for publication as all or part of an Internet-Draft or RFC and any statement made within the context of an IETF activity, in each case that is intended to affect the IETF Standards Process or that is related to the activity of an Alternate Stream that has adopted this definition.

Such statements include oral statements, as well as written and electronic communications, which are addressed to:

- the IETF plenary session,
- any IETF working group or portion thereof,
- any IETF "birds of a feather" (BOF) session or portion thereof,
- any IETF-sanctioned design team or portion thereof,
- the IESG, or any member thereof on behalf of the IESG,
- the IAB or any member thereof on behalf of the IAB,
- any IETF mailing list, web site, chat room or discussion board, operated by or under the auspices of the IETF, including the IETF list itself,
- the RFC Editor or the Internet-Drafts function.

Statements made outside of an IETF session, mailing list or other function, or that are clearly not intended to be input to an IETF activity, group or function, are not Contributions in the context
of this document. For example, the presentations made by invited
speakers at IETF plenary sessions to discuss advances in Internet
technology generally, or to describe their existing products or
technologies, are not Contributions.

Throughout this memo, the term "written Contribution" is used.
For purposes of this memo, "written" means reduced to a written or
visual form in any language and any media, permanent or temporary,
including but not limited to traditional documents, e-mail
messages, discussion board postings, slide presentations, text
messages, instant messages, and transcriptions of oral statements.

c. "Contributor": an individual submitting a Contribution
d. "Covers" or "Covered" mean that a valid claim of a patent or a
patent application (including a provisional patent application) in
any jurisdiction, or any other Intellectual Property Right, would
necessarily be infringed by the exercise of a right (e.g., making,
using, selling, importing, distribution, copying, etc.) with
respect to an Implementing Technology. For purposes of this
definition, "valid claim" means a claim of any unexpired patent or
patent application which shall not have been withdrawn, cancelled
or disclaimed, nor held invalid by a court of competent
jurisdiction in an unappealed or unappealable decision.

e. "IETF": In the context of this document, the IETF includes all
individuals who participate in meetings, working groups, mailing
lists, functions and other activities which are organized or
initiated by ISOC, the IESG or the IAB under the general
designation of the Internet Engineering Task Force or IETF, but
solely to the extent of such participation.

f. "IETF Documents": RFCs and Internet-Drafts that are published as
part of the IETF Standards Process. These are also referred to as
"IETF Stream Documents" as defined in Section 5.1.1 of RFC 4844.

g. "IETF Standards Process": the activities undertaken by the IETF in
any of the settings described in the above definition of
Contribution. The IETF Standards Process may include
participation in activities and publication of documents that are
not directed toward the development of IETF standards or
specifications, such as the development and publication of
informational documents.

h. "IPR" or "Intellectual Property Rights": means a patent, utility
model, or similar right that may Cover an Implementing Technology,
whether such rights arise from a registration or renewal thereof,
or an application therefore, in each case anywhere in the world.
See [RFC5378] for a discussion of Trademarks.

i. "Implementing Technology": means a technology that implements an IETF specification or standard.

j. "Internet-Draft": a temporary document used in the IETF and RFC Editor processes, as described in [RFC2026].

k. "Participating in an IETF discussion or activity": means making a Contribution, as described above, or in any other way acting in order to influence the outcome of a discussion relating to the IETF Standards Process. Without limiting the generality of the foregoing, acting as a working group chair or Area Director constitutes "Participating" in all activities of the relevant working group or area.

l. "Reasonably and personally known": means something an individual knows personally or, because of the job the individual holds, would reasonably be expected to know. This wording is used to indicate that an organization cannot purposely keep an individual in the dark about patents or patent applications just to avoid the disclosure requirement. But this requirement should not be interpreted as requiring the IETF Contributor or participant (or his or her represented organization, if any) to perform a patent search to find applicable IPR.

m. "RFC": the basic publication series for the IETF. RFCs are published by the RFC Editor and once published are never modified. (See [RFC2026] Section 2.1)

2. Introduction

The IETF policies about Intellectual Property Rights (IPR), such as patent rights, relative to technologies developed in the IETF are designed to ensure that IETF working groups and participants have as much information about any IPR constraints on a technical proposal as possible. The policies are intended to benefit the Internet community and the public at large, while respecting the legitimate rights of IPR holders. This memo details the IETF policies concerning IPR related to technology worked on within the IETF. It also describes the objectives that the policies are designed to meet. This memo updates RFC 2026 [RFC2026] and obsoletes RFC 3979 [RFC3979] and RFC 4879 [RFC4879].

Section 1 defines the terms used in this document. Sections 3 through 11 set forth the IETF’s policies and procedures relating to IPR. Section 13 lists the changes between this document and RFCs 3979 and 4879. A separate document [RFC5378] deals with rights (such
as copyrights and Trademarks) in Contributions, including the right of IETF and its participants to publish and create derivative works of those Contributions. This document is not intended to address those issues. See RFC 6702 [RFC6702] for a discussion of "Promoting Compliance with Intellectual Property Rights (IPR) Disclosure Rules". This document is not intended as legal advice. Readers are advised to consult their own legal advisors if they would like a legal interpretation of their rights or the rights of the IETF in any Contributions they make.

3. Contributions to the IETF

3.1. General Policy

In all matters relating to Intellectual Property Rights, the intent is to benefit the Internet community and the public at large, while respecting the legitimate rights of others.

3.2. Rights and Permissions

By submission of a Contribution, each person actually submitting the Contribution, and each named co-Contributor, is deemed to agree to the following terms and conditions, on his or her own behalf, and on behalf of the organizations the Contributor represents or is sponsored by (if any) when submitting the Contribution.

A. The Contributor represents that he or she has made or will promptly make all disclosures required by Section 5.1.1 of this document.

B. The Contributor represents that there are no limits to the Contributor’s ability to make the grants, acknowledgments and agreements herein that are reasonably and personally known to the Contributor.

4. Actions for Documents for which IPR Disclosure(s) Have Been Received

A. The IESG, IAB, ISOC and IETF Trust disclaim any responsibility for identifying the existence of or for evaluating the applicability of any IPR, disclosed or otherwise, to any IETF technology, specification or standard, and will take no position on the validity or scope of any such IPR.

B. When the IETF Secretariat has received a notification under Section 5.1.3 of the existence of non-participant IPR that potentially Covers a technology under discussion at IETF or which is the subject of an IETF Document, the IETF Secretariat shall promptly publish such notification and will request that the
identified third party make an IPR disclosure in accordance with the provisions of Section 5.

C. When an IPR disclosure has been made as provided in Section 5 of this document, the IETF Secretariat may request from the purported holder of such IPR, a written assurance that upon approval by the IESG for publication of the relevant IETF specification(s) as one or more RFCs, all persons will be able to obtain the right to implement, use, distribute and exercise other rights with respect to Implementing Technology under one of the licensing options specified in Section 5.5.A below unless such a statement has already been submitted. The working group proposing the use of the technology with respect to which the Intellectual Property Rights are disclosed may assist the IETF Secretariat in this effort.

The results of this procedure shall not, in themselves, block publication of an IETF Document or advancement of an IETF Document along the standards track. A working group may take into consideration the results of this procedure in evaluating the technology, and the IESG may defer approval when a delay may facilitate obtaining such assurances. The results will, however, be recorded by the IETF Secretariat, and be made available online.

D. Determination of Provision of Reasonable and Non-discriminatory Terms

The IESG will not make any determination that any terms for the use of an Implementing Technology has been fulfilled in practice.

5. IPR Disclosures

This document refers to the IETF participant making disclosures, consistent with the general IETF philosophy that participants in the IETF act as individuals. A participant’s obligation to make a disclosure is also considered satisfied if the IPR owner or the participant’s employer or sponsor makes an appropriate disclosure in place of the participant doing so.

5.1. Who Must Make an IPR Disclosure?

5.1.1. A Contributor’s IPR in his or her Contribution

Any Contributor who reasonably and personally knows of IPR meeting the conditions of Section 5.6 which the Contributor believes Covers or may ultimately Cover his or her written Contribution (other than a
Contribution that is not intended to be used as an input into the IETF Standards Process), or which the Contributor reasonably and personally knows his or her employer or sponsor may assert against Implementing Technologies based on such written Contribution, must make a disclosure in accordance with this Section 5.

5.1.2. An IETF Participant’s IPR in Contributions by Others

Any individual participating in an IETF discussion or activity who reasonably and personally knows of IPR meeting the conditions of Section 5.6 which the individual believes Covers or may ultimately Cover a written Contribution made by another person, or which such IETF participant reasonably and personally knows his or her employer or sponsor may assert against Implementing Technologies based on such written Contribution, must make a disclosure in accordance with this Section 5.

5.1.3. IPR of Others

If any person has information about IPR that may Cover a written Contribution, but such person is not required to disclose such IPR because it does not meet the criteria in Section 6.6 (e.g., the IPR is not owned or controlled by the person or his or her employer or sponsor, or such person is not an IETF participant), such person is encouraged to file a third party disclosure as described in Section 5.3 below. Such a notice should be filed as soon as reasonably possible after the IETF participant realizes the connection.

5.2. The Timing of Providing Disclosure

Timely IPR disclosure is important because working groups need to have as much information as they can while they are evaluating alternative solutions.

5.2.1. Timing of Disclosure Under Section 5.1.1

A. The IPR disclosure required pursuant to section 5.1.1 must be made as soon as reasonably possible after the Contribution is submitted or made unless the required disclosure is already on file. For example, if the Contribution is an update to a Contribution for which an IPR disclosure has already been made and the applicability of the disclosure is not changed by the new Contribution, then no new disclosure is required. But if the Contribution is a new one, or is one that changes an existing Contribution such that the revised Contribution is no longer Covered by the disclosed IPR or would be Covered by new or different IPR, then a disclosure must be made.
B. If a Contributor first learns of IPR in its Contribution that meets the conditions of Section 5.6, for example a new patent application or the discovery of a relevant patent in a patent portfolio, after the Contribution is published in an Internet-Draft, a disclosure must be made as soon as reasonably possible after the IPR becomes reasonably and personally known to the Contributor.

5.2.2. Timing of Disclosure Under Section 5.1.2

The IPR disclosure required pursuant to section 5.1.2 must be made as soon as reasonably possible after the Contribution is made, unless the required disclosure is already on file.

Participants who realize that IPR meeting the conditions of Section 5.6 will be or has been incorporated into a Contribution, or is seriously being discussed in a working group, are strongly encouraged to make a preliminary IPR disclosure. That IPR disclosure should be made as soon after coming to the realization as reasonably possible, not waiting until the Contribution is actually made.

If an IETF participant first learns of IPR that meets the conditions of Section 5.6 in a Contribution by another party, for example a new patent application or the discovery of a relevant patent in a patent portfolio, after the Contribution was made, an IPR disclosure must be made as soon as reasonably possible after the Contribution or IPR becomes reasonably and personally known to the participant.

5.3. How Must an IPR Disclosure be Made?

IPR disclosures are made by following the instructions at http://www.ietf.org/ipr-instructions.

5.4. What Must be in an IPR Disclosure? Updating IPR Disclosures.

5.4.1. What Must be in an IPR Disclosure?

An IPR disclosure must list the numbers of any issued patents or published patent applications or indicate that the claim is based on unpublished patent applications. The IPR disclosure must also list the name(s) of the inventor(s) (with respect to issued patents and published patent applications) and the specific IETF Document(s) or activity affected. If the IETF Document is an Internet-Draft, it must be referenced by specific version number. In addition, if the IETF Document includes multiple parts and it is not reasonably apparent which part of such IETF Document is alleged to be Covered by the IPR in question, the discloser must identify the sections of the
IETF Document that are alleged to be so Covered.

5.4.2. Updating IPR Disclosures.

Claimants should be aware that as drafts evolve, text may be added or removed, and it is recommended that they keep this in mind when composing text for disclosures.

A. An IPR disclosure must be updated or a new disclosure made promptly after any of the following has occurred: (1) the publication of a previously unpublished patent application, (unless sufficient information to identify the published application was disclosed when the unpublished application was disclosed), (2) the abandonment of a patent application (3) the issuance of a patent on a previously disclosed patent application (unless sufficient information to identify the issued patent was disclosed when the patent application was disclosed), (4) a material change to the IETF Document covered by the Disclosure that causes the Disclosure to be covered by additional IPR. If a patent has issued, then the new IPR disclosure must include the patent number and, if the claims of the granted patent differ from those of the application in manner material to the relevant Contribution, the IPR disclosure must describe any differences in applicability to the Contribution. If the patent application was abandoned, then the new IPR disclosure must explicitly withdraw any earlier IPR disclosures based on the application. IPR disclosures against a particular Contribution are assumed to be inherited by revisions of the Contribution and by any RFCs that are published from the Contribution unless the disclosure has been updated or withdrawn.

B. If an IPR holder files patent applications in additional countries, the claims of which are substantially identical to the claims of a patent or patent application previously disclosed in an IPR disclosure, the IPR holder is not required to make a new or updated IPR disclosure as a result of filing such applications or the issuance of patents on such applications.

C. New or revised IPR disclosures may be made voluntarily at any other time, provided that licensing information may only be updated in accordance with Section 5.5.C.

D. Any person may submit to IETF an update to an existing IPR disclosure. If such update is submitted by a person other than the submitter of the original IPR disclosure (as identified by name and e-mail address), then the Secretariat shall attempt to contact the original submitter to verify the update. If the original submitter responds that the proposed update is valid, the
Secretariat will update the IPR disclosure accordingly. If the original submitter responds that the proposed update is not valid, the Secretariat will not update the IPR disclosure. If the original submitter fails to respond after the Secretariat has made three separate inquiries and at least 30 days have elapsed since the initial inquiry was made, then the Secretariat will inform the submitter of the proposed update that the update was not validated, and that the updater must produce legally sufficient evidence that the submitter (or his/her employer) owns or has the legal right to exercise control over the IPR subject to the IPR disclosure. If such evidence is satisfactory to the Secretariat, after consultation with legal counsel, then the Secretariat will make the requested update. If such evidence is not satisfactory, then the Secretariat will not make the requested update.

5.4.3. The requirement to make an IPR disclosure is not satisfied by the submission of a blanket statement that IPR may exist on every Contribution or a general category of Contributions. This is the case because the aim of the disclosure requirement is to provide information about specific IPR against specific technology under discussion in the IETF. The requirement is also not satisfied by a blanket statement of willingness or commitment to license all potential IPR Covering such technology under fair, reasonable and non-discriminatory terms for the same reason. However, the requirement for an IPR disclosure is satisfied by a blanket statement of the IPR discloser’s commitment to license all of its IPR meeting the requirements of Section 5.6 (and either Section 5.1.1 or 5.1.2) to implementers of an IETF specification on a royalty-free (and otherwise reasonable and non-discriminatory) basis as long as any other terms and conditions are disclosed in the IPR disclosure.

5.5. Licensing Information in an IPR Disclosure

A. Since IPR disclosures will be used by IETF working groups during their evaluation of alternative technical solutions, it is helpful if an IPR disclosure includes information about licensing of the IPR in case Implementing Technologies require a license. Specifically, it is helpful to indicate whether, upon approval by the IESG for publication as an RFC of the relevant IETF specification(s), all persons will be able to obtain the right to implement, use, distribute and exercise other rights with respect to an Implementing Technology a) under a royalty-free and otherwise reasonable and non-discriminatory license, or b) under a license that contains reasonable and non-discriminatory terms and conditions, including a reasonable royalty or other payment, or c) without the need to obtain a license from the IPR holder (i.e., a covenant not to sue).
B. The inclusion of a licensing declaration is not mandatory but it
is encouraged so that the working groups will have as much
information as they can during their deliberations. If the
inclusion of a licensing declaration in an IPR disclosure would
significantly delay its submission it is quite reasonable to
submit an IPR disclosure without a licensing declaration and then
submit a new IPR disclosure when the licensing declaration becomes
available. IPR disclosures that voluntarily provide text that
includes licensing information, comments, notes, or URL for other
information may also voluntarily include details regarding
specific licensing terms that the IPR holder intends to offer to
implementers of Implementing Technologies, including maximum
royalty rates

C. It is likely that IETF participants will rely on licensing
declarations and other information that may be contained in an IPR
disclosure and that they will make technical, legal and commercial
decisions on the basis of such commitments and information. Thus,
when licensing declarations and information, comments, notes, or
URLs for further information are contained in an IPR disclosure,
such materials shall be deemed irrevocable, and will attach to the
associated IPR, and all implementers of Implementing Technologies
will be justified and entitled to rely on such materials in
relating to such IPR, whether or not it is subsequently
transferred to a third party by the IPR holder making the
commitment or providing the information. IPR holders making IPR
disclosures that contain licensing declarations or providing such
information, comments, notes or URLs for further information must
ensure that such commitments are binding on any subsequent
transferee of the relevant IPR.

D. Licensing declarations must be made by people who are authorized
to make such declarations.

5.6. Level of Control over IPR requiring Disclosure

IPR disclosures under Sections 5.1.1. and 5.1.2 are required with
respect to IPR that is (a) owned, directly or indirectly, by the
individual or his/her employer or sponsor (if any) or (b) that such
persons otherwise have the right to license or assert or (c) that
such persons derive a direct or indirect pecuniary benefit from such
IPR, or (d) in the case of an individual, the individual is listed as
an inventor on a patent or patent application.

5.7. Disclosures for Oral Contributions.

If a Contribution is oral and is not followed promptly by a written
disclosure of the same material, and if such oral Contribution would
be subject to a requirement that an IPR Disclosure be made had such oral Contribution been written, then the Contributor must accompany such oral Contribution with an oral declaration that he/she is aware of relevant IPR in as much detail as reasonably possible, or file an IPR Declaration with respect to such oral Contribution that otherwise complies with the provisions of Sections 5.1 to 5.6 above.

5.8. General Disclosures.

The IETF may make available a public facility (e.g., a web page and associated database) for the posting of IPR-related information and disclosures that do not conform to the requirements of Sections 5.1 to 5.6 ("General Disclosures"). General Disclosures may include, among other things, "blanket disclosures" described in Section 5.4.3 (other than blanket disclosures accompanied by royalty-free licensing commitments, as permitted by Section 5.4.3), disclosures of IPR that do not identify the specific IETF Documents Covered by the disclosed IPR, and licensing statements or commitments that are applicable generally and not to specific IPR disclosures. All of this information may be helpful to the IETF community, and its disclosure is encouraged. However, General Disclosures do not satisfy an IETF participant’s obligation to make IPR disclosures as required by this policy.

In some cases, if an IPR disclosure submitted by an IETF participant does not meet the requirements of this policy, the IETF may elect to post the non-conforming IPR disclosure as a General Disclosure, in order to provide the greatest amount of information to the IETF community. This action does not excuse the IETF participant from submitting a new IPR disclosure that conforms with the requirements of Sections 5.1 to 5.6. The IETF reserves the right to decline to publish General Disclosures that are not relevant to IETF activities, that are, or are suspected of being, defamatory, false, misleading, in violation of privacy or other applicable laws or regulations, or that are in a format that is not suitable for posting on the IETF facility that has been designated for General Disclosures.

6. Failure to Disclose

There may be cases in which individuals are not permitted by their employers or by other factors to disclose the existence or substance of patent applications or other IPR. Since disclosure is required for anyone making a Contribution or participating in IETF activities, a person who is not willing or able to disclose IPR for this reason, or any other reason, must not contribute to or participate in IETF activities with respect to technologies that he or she reasonably and personally knows to be Covered by IPR which he or she will not disclose.
Contributing to or participating in IETF activities about a technology without making required IPR disclosures is a violation of IETF process.

In addition to any remedies or defenses that may be available to implementers and others under the law with respect to such a violation (e.g., rendering the relevant IPR unenforceable), the IESG may, when it in good faith concludes that such a violation has occurred, impose penalties including, but not limited to, suspending the posting/participation rights of the offending individual, suspending the posting/participation rights of other individuals employed by the same company as the offending individual, amending, withdrawing or superseding the relevant IETF Documents, and publicly announcing the facts surrounding such violation, including the name of the offending individual and his or her employer or sponsor. See [RFC6701] for details.

7. Evaluating Alternative Technologies in IETF Working Groups

In general, IETF working groups prefer technologies with no known IPR claims or, for technologies with claims against them, an offer of royalty-free licensing. However, to solve a given technical problem, IETF working groups have the discretion to adopt a technology as to which IPR claims have been made if they feel that this technology is superior enough to alternatives with fewer IPR claims or free licensing to outweigh the potential cost of the licenses. To assist these working groups, it is helpful for the IPR claimants to declare, in their IPR Declarations, the terms, if any, on which they are willing to license their IPR Covering the relevant IETF Documents. When evaluating the desirability of adopting such technologies, IETF working groups generally prefer such terms in the following order (from most to least desirable):

a) commitment not to assert declared IPR;
b) commitment to license declared IPR on royalty-free terms that are otherwise fair, reasonable and non-discriminatory (RAND-z);
c) commitment to license declared IPR on terms that are fair, reasonable and non-discriminatory, and which may bear royalties or other financial obligations (FRAND or RAND);
d) commitment to license, with no constraints on terms;
e) no commitment to license.

The level of use of a technology against which IPR is disclosed is also an important factor in weighing IPR encumbrances and associated licensing conditions against technical merits. For example, if technologies are being considered for a mandatory-to-implement change to a widely deployed protocol, the hurdle should be very high for encumbered technologies, whereas a similar hurdle for a new protocol
could conceivably be lower.

It is also important to note that monetary compensation is only one of several factors that individuals in WGs and the IESG need to consider when analyzing licensing terms contained in IPR disclosures. Thus, if particularly onerous non-monetary terms are included in a particular disclosure, they may be viewed as less desirable than less onerous terms that may bear a higher monetary burden.

Over the last few years the IETF has adopted stricter requirements for some security technologies. It has become common to have a mandatory-to-implement security technology in IETF technology specifications. This is to ensure that there will be at least one common security technology present in all implementations of such a specification that can be used in all cases. This does not limit the specification from including other security technologies, the use of which could be negotiated between implementations. An IETF consensus has developed that no mandatory-to-implement security technology can be specified in an IETF specification unless it has no known IPR claims against it or a royalty-free license is available to all implementers of the specification unless there is a very good reason to do so. This limitation does not extend to other security technologies in the same specification if they are not listed as mandatory-to-implement.

It should also be noted that the absence of IPR disclosures at any given time is not the same thing as the knowledge that there will be no IPR disclosure in the future, or that no IPR Covers the relevant technology. People or organizations not currently involved in the IETF or people or organizations that discover IPR they feel to be relevant in their patent portfolios can make IPR disclosures at any time and ma, in fact, be required to do so under Section 6.

It should be noted that the validity and enforceability of any IPR may be challenged for legitimate reasons outside the IETF. The mere existence of an IPR disclosure should not automatically be taken to mean that the disclosed IPR is valid or enforceable. Although the IETF can make no actual determination of validity, enforceability or applicability of any particular IPR claim, it is reasonable that a working group or the IESG will take into account on their own views of the validity, enforceability or applicability of IPR in their evaluation of alternative technologies.

8. Change Control for Technologies

The IETF must have change control over the technology described in any standards track IETF Documents in order to fix problems that may
be discovered or to produce other derivative works.

In some cases the developer of patented or otherwise controlled technology may decide to hand over to the IETF the right to evolve the technology (a.k.a., "change control"). The implementation of an agreement between the IETF and the developer of the technology can be complex. (See [RFC1790] and [RFC2339] for examples.)

Note that there is no inherent prohibition against a standards track IETF Document making a normative reference to proprietary technology. For example, a number of IETF Standards support proprietary cryptographic transforms.

9. Licensing Requirements to Advance Standards Track IETF Documents

RFC 6410 [RFC6410] Section 2.2 states: "If the technology required to implement the specification requires patented or otherwise controlled technology, then the set of implementations must demonstrate at least two independent, separate and successful uses of the licensing process." A key word in this text is "requires." The mere existence of disclosed IPR does not necessarily mean that licenses are actually required in order to implement the technology.

10. No IPR Disclosures in IETF Documents

IETF Documents must not contain any mention of specific IPR. All specific IPR disclosures must be submitted as described in Section 5. Readers should always refer to the on-line web page to get a full list of IPR disclosures received by the IETF concerning any Contribution. (http://www.ietf.org/ipr/)

11. Application to non-IETF Stream Documents

This memo has been developed for the benefit and use of the IETF community. As such, the rules set forth herein apply to all Contributions and IETF Documents that are in the "IETF Document Stream" as defined in Section 5.1.1 of RFC 4844 (i.e., those that are contributed, developed, edited and published as part of the IETF Standards Process). The IAB Document Stream, the IRTF Document Stream and the Independent Submission Stream, each as defined in Section 5.1 of RFC 4844 are referred to collectively herein as "Alternate Streams".

The legal rules that apply to documents in Alternate Streams are established by the managers of those Alternate Streams as defined in [RFC 4844]. (i.e., the Internet Architecture Board (IAB), Internet Research Steering Group (IRSG) and Independent Submission Editor). These managers may elect, through their own internal processes, to
cause this memo to be applied to documents contributed to them for development, editing and publication in their respective Alternate Streams. If an Alternate Stream manager elects to adopt this memo, they must do so in a manner that is public and notifies their respective document contributors that this memo applies to their respective Alternate Streams. In such case, each occurrence of the term "Contribution," and "IETF Document" in this memo shall be read to mean a contribution or document in such Alternate Stream, as the case may be. It would be advisable for such Alternate Stream manager to consider adapting the definitions of "Contribution," and other provisions in the memo to suit their particular needs.

12. Security Considerations

This memo relates to IETF process, not any particular technology. There are security considerations when adopting any technology, whether IPR-protected or not. A working group should take those security considerations into account as one part of evaluating the technology, just as IPR is one part, but there are no known issues of security with IPR procedures.

13. Changes Since RFC 3979 and RFC 4879

[this section will be revised before publication to list the actual changes that are approved]

This document combines RFC 3979 and RFC 4879.

Reordered the defined terms

Boilerplate -- since the document boilerplate formerly in BCP79 Sec. 5 has been moved to the Trust Legal Provisions since 2009, deleted the boilerplate requirements from this document.

Foreign Counterparts -- don’t need to file a new IPR disclosure

Provisional Apps -- suggest that these be required to be disclosed only if they are filed with claims.

Inventor names -- added words requiring that inventors be listed along with patent numbers.

Oral statements -- the existing text is internally contradictory. Some places say that disclosures must be made for oral statements, but others talk about disclosures only being required following publication as an ID. Proposed that oral statements don’t trigger the normal IPR disclosure obligations, as oral statements are inherently imprecise and it’s hard to know when they describe
something covered by the technical terms of a patent claim. However, if an oral contribution is made and it is not followed by a written contribution, then the oral discloser must either make a concurrent oral IPR disclosure or file a formal written disclosure.

Other Contribution Clarification -- suggested a number of other clarifications to the definition of Contribution that have come up over the years, including the addition of BOFs.

WG Consideration of Patents -- this is mostly in the existing language, but added a sentence saying that WGs should not engage in collective licensing negotiation.

Disclosure of licensing terms is ok -- added a sentence.

Licensing commitments are irrevocable -- added a paragraph.

Lurkers -- this is a complicated issue that runs throughout the document. At a high level, suggested that lurkers ARE required to make IPR disclosures, to avoid a Rambus situation.

Penalties -- This paragraph outlining possible sanctions the IESG may impose should be reconciled with the recent RFC that discusses penalties.

Updating Disclosures -- added a number of clauses to address issues that have come up over the years, including updating obligations if an employee changes jobs or his/her employer buys another company.

Alternate Streams -- borrowed and adapted the copyright language used in the Trust Legal Provisions. Each alternate stream (Independent, IRTF and IAB) would need to take some action (preferably issuing an RFC) to adopt BCP 79 for its stream. This was done with copyright already, and pretty smoothly.

IETF Exec Dir -- flagged the various places where the IETF Exec Director is supposed to do something under this policy. Not sure whether these things are getting done today or by whom. Need to rationalize and update these procedures based on the current admin structure.

Generally, also tried to cut back some of the historical and explanatory text that seemed outdated

version 00 -> version 01

many clean ups suggested by Russ Housley
removed "informational" from section 5.1.1

version 01 -> version 02

change RFC 2026 reference in section 9 to RFC 6410
fixed multiple references to (old) section 6
revised section 5.5 to clarify the intention, as suggested by David Rudin

version 02 -> version 03

created a definition of "participation" in the definitions section as suggested by multiple people
A number of changes suggested by Adrian Farrel
expanded introduction by including a copy of the abstract
fixed reference to RFC 6701
add mention of RFC 6702 to the introduction and added RFC 6702 to the references
removed last sentence of section 5.4.2 B
removed discussion of asking for info on non-US patents from section 13
revised 5.4.2.C
added 5.4.2 D based on a suggestion by Alexa Morris
add note about inheritance to section 5.4.2.A
revise list of bullets for definition of contribution - section 1.b
added 5.5.D
fixed wording problem in 5.2.2 noted by SM

version 03 -> version 04

revised definition of "Participating in an IETF discussion or activity" section 1.k
changed language re "foreign" patents - section 5.4.2 B
removed mention of claims in provisional applications in section 1.d

version 04 -> version 05
revised section 1.k based on list discussion
tightened up section 4.B and removed the last sentence which
describes a function that does not seem to be done - suggested by
Fabian Gonell
change the requirement in section 5.1.1.B to a request -- suggested
by Fabian Gonell
replaced "withdraw" with "update" in 5.1.1.B since the disclosure is
still valid against the older Contribution
remove section 5.2.1.C as redundant - suggested by Fabian Gonell
added text from the mailing list discussion to Section 5.4.2
revised section 5.4.2.D to have the licensing information
requirements in one place. - suggested by Fabian Gonell

version 05 -> version 06
revised 1.k based on BOF and list discussion, added assumptive
participation for WG chairs & ADs
changed "should" in 4.C to reflect current practice
removed 5.1.1 B since the topic is covered in 5.4.3
added "with respect to issued patents and published patent
applications" in 5.4.1 based on BOF discussion
revised 5.4.2 A based on BOF discussion
removed 5.4.2 C since it was redundant
added parenthetical at the end of 5.5 A
added additional clause to 5.6 based on issue that came up
added 5.8 on general disclosures based on BOF discussion
revised 7 based on suggestions by Stephen Wegner and mailing list
discussions
removed the last sentence of 7 since the legal picture is changing
