YANG Data Model for BIER Protocol
draft-chh-bier-bier-yang-04.txt

Abstract

This document defines a YANG data model for BIER configuration and operation.

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at http://datatracker.ietf.org/drafts/current/.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on November 20, 2016.

3. Configuration

This Module augments the "/rt:routing:" with a BIER container. This Container defines all the configuration parameters related to BIER for this particular routing.

The BIER configuration contains global configuration.

The global configuration includes BIER encapsulation type, imposition BitStringLengths, BFR-id, BFR-prefixes, and parameters associated with bier sub-domain.

In this document, we contains two types of BitStringLengths: Imposition and Disposition BitStringLengths, as defined in ([I-D.ietf-bier-architecture]). The imposition BitStringLengths is defined under bier-global container, and the disposition BitStringLengths is defined under the sub-domain.

4. Control plane configuration

This Module supports ISIS ([I-D.ietf-bier-isis-extensions]) and OSPF ([I-D.ietf-bier-ospf-bier-extensions]) as control plane for BIER.
5. States

The operational states contains basic parameters associated with bier, such as BIER encapsulation type, BitStringLengths, BFR-id, BFR-prefixes, and parameters associated with bier sub-domain.

It also includes the Bit Index Routing Table (BIRT).

6. Notification

This Module includes bfr-id-collision, bfr-zero, and sub-domain-id-collision.

7. BIER YANG Data Model
