SCTP Socket API Extensions for Concurrent Multipath Transfer
draft-dreibholz-tsvwg-sctpsocket-multipath-02.txt

Abstract

This document describes extensions to the SCTP sockets API for configuring the CMT-SCTP and CMT/RP-SCTP extensions.

Status of this Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at http://datatracker.ietf.org/drafts/current/.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on April 28, 2012.

1. Introduction

This draft describes extensions to the SCTP sockets API (see [I-D.ietf-tsvwg-sctpsocket], [RFC4960]) which allow an application to configure the behaviour of the Concurrent Multipath Transfer (CMT) extensions CMT-SCTP, CMT/RPv1-SCTP, CMT/RPv2-SCTP and MPTCP-like (see [I-D.tuexen-tsvwg-sctp-multipath], [Globecom2010], [PAMS2011], [SoftCOM2011], [ConTEL2011], [AINA2010], [IAS2006]).

2. Concurrent Multipath Transfer and Resource Pooling Activation/Deactivation (SCTP_CMT_ON_OFF)

This socket option activates or deactivates CMT and sets the corresponding Resource Pooling variant to be applied. The sctp_assoc_value structure is used to specify the association for which the CMT state should be changed and the new CMT state.

Definition of the sctp_assoc_value structure:

```
struct sctp_assoc_value {
    sctp_assoc_t assoc_id;
    uint32_t assoc_value;
};
```

assoc_id:  Holds the identifier for the association of which the CMT state should be changed. Ignored for one-to-one style sockets.

assoc_value:

0  Turns CMT off.

1  Turns plain CMT-SCTP on. No Resource Pooling is applied.

2  Turns CMT-SCTP on. CMT/RPv1 Resource Pooling as defined in [AINA2010] is applied.

3  Turns CMT-SCTP on. CMT/RPv2 Resource Pooling as defined in [ConTEL2011] is applied.

4  Turns CMT-SCTP on. MPTCP-like Resource Pooling as defined in [SoftCOM2011], [ConTEL2011] is applied.

3. Security Considerations

Security considerations for the SCTP sockets API are described by [I-D.ietf-tsvwg-sctpsocket].
4. IANA Considerations

This document does not require IANA actions.

5. Acknowledgments

The authors would like to thank Michael Tuexen for his support.
