Algorithm Identifiers for the
HMAC-based Extract-and-Expand Key Derivation Function (HKDF)
<draft-housley-hkdf-oids-01.txt>

Abstract

RFC 5869 specifies the HMAC-based Extract-and-Expand Key Derivation Function (HKDF) algorithm. This document assigns algorithm identifiers to the HKDF algorithm when used with three common one-way hash functions.

Status of this Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at http://datatracker.ietf.org/drafts/current/.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

Please review these documents carefully, as they describe your rights and restrictions with respect to this document. Code Components extracted from this document must include Simplified BSD License text as described in Section 4.e of the Trust Legal Provisions and are provided without warranty as described in the Simplified BSD License.
1. Introduction

The HKDF algorithm [RFC5869] is a key derivation function based on the Hashed Message Authentication Code (HMAC). This document assigns algorithm identifiers to the HKDF algorithm when used with three common one-way hash functions. These algorithm identifiers are needed to make use of the HKDF in some security protocols, such as the The Cryptographic Message Syntax (CMS) [RFC5652].

1.1. Terminology

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "NOT RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in BCP 14 [RFC2119] when, and only when, they appear in all capitals, as shown here.

1.2. ASN.1

In this specification, values are generated using ASN.1 [X.680] using the Basic Encoding Rules (BER) and the Distinguished Encoding Rules (DER) [X.690].

2. HKDF Algorithm Identifiers

This section assigns algorithm identifier to HKDF [RFC5869] used with three common one-way hash functions that are specified in [SHS], SHA-256, SHA-384, and SHA-512. When any of these three object identifiers appears within the ASN.1 type AlgorithmIdentifier, the parameters component of that type SHALL be absent.

The specification of AlgorithmIdentifier is available in [RFC5911], which is an evolution from the original definition in X.509 [X.509-88].
The assigned object identifiers are:

id-alg-hkdf-with-sha256 OBJECT IDENTIFIER ::= { iso(1) member-body(2)
    us(840) rsadsi(113549) pkcs(1) pkcs-9(9) smime(16) alg(3) TBD1 }

id-alg-hkdf-with-sha384 OBJECT IDENTIFIER ::= { iso(1) member-body(2)
    us(840) rsadsi(113549) pkcs(1) pkcs-9(9) smime(16) alg(3) TBD2 }

id-alg-hkdf-with-sha512 OBJECT IDENTIFIER ::= { iso(1) member-body(2)
    us(840) rsadsi(113549) pkcs(1) pkcs-9(9) smime(16) alg(3) TBD3 }

3. ASN.1 Module

This section contains the ASN.1 module for the HKDF algorithm
identifiers. This module imports types from other ASN.1 modules that
are defined in [RFC5912].

HKDF-OID-2019
{ iso(1) member-body(2) us(840) rsadsi(113549) pkcs(1) pkcs-9(9)
    smime(16) modules(0) id-mod-hkdf-oid-2019(TBD0) }

DEFINITIONS IMPLICIT TAGS ::= BEGIN

id-alg-hkdf-with-sha256 OBJECT IDENTIFIER ::= { iso(1) member-body(2)
    us(840) rsadsi(113549) pkcs(1) pkcs-9(9) smime(16) alg(3) TBD1 }

id-alg-hkdf-with-sha384 OBJECT IDENTIFIER ::= { iso(1) member-body(2)
    us(840) rsadsi(113549) pkcs(1) pkcs-9(9) smime(16) alg(3) TBD2 }

id-alg-hkdf-with-sha512 OBJECT IDENTIFIER ::= { iso(1) member-body(2)
    us(840) rsadsi(113549) pkcs(1) pkcs-9(9) smime(16) alg(3) TBD3 }

4. Security Considerations

In spite of the simplicity of HKDF, there are many security considerations that have been taken into account in the design and analysis of this construction. An exposition of all of these aspects is well beyond the scope of this document. Please refer to [EPRINT] for detailed information, including rationale for the HKDF design.

5. IANA Considerations

One object identifier for the ASN.1 module in the Section 3 was assigned in the SMI Security for S/MIME Module Identifiers (1.2.840.113549.1.9.16.0) [IANA-MOD] registry:

```
    id-mod-hkdf-oid-2019 OBJECT IDENTIFIER ::= {
        iso(1) member-body(2) us(840) rsadsi(113549) pkcs(1)
        pkcs-9(9) smime(16) mod(0) TBD0 }
```

Three object identifiers for the HKDF algorithm identifiers were assigned in the SMI Security for S/MIME Mail Security Algorithms
(1.2.840.113549.1.9.16.3) [IANA-ALG] registry:

```
id-alg-hkdf-with-sha256 OBJECT IDENTIFIER ::= { iso(1) member-body(2)
    us(840) rsadsi(113549) pkcs(1) pkcs-9(9) smime(16) alg(3) TBD1 }

id-alg-hkdf-with-sha384 OBJECT IDENTIFIER ::= { iso(1) member-body(2)
    us(840) rsadsi(113549) pkcs(1) pkcs-9(9) smime(16) alg(3) TBD2 }

id-alg-hkdf-with-sha512 OBJECT IDENTIFIER ::= { iso(1) member-body(2)
    us(840) rsadsi(113549) pkcs(1) pkcs-9(9) smime(16) alg(3) TBD3 }
```
