Abstract

This document describes the need for an httpi protocol similar to https used for intelligent surfing of information.

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at http://datatracker.ietf.org/drafts/current/.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on Dec 30, 2014.
1. Introduction

To implement an http:// service in browser similar to https

2. Background

Right now URL’s are hardcoded. I propose an http:// service
that would allow dynamic links that can be updated by the http service in the text that you are viewing. So every time interval like
a minute or so, the content you are viewing using the http:// service in your browser can show newer links that you can traverse or navigate

3. General Information of the service

Having a parallel browser realm, that allows intelligent updates of navigatable links from WWW intelligent computing realm. Instead of using http:// you just need to type http:// in your URL and the texts you view would not have any hardcoded navigatable links but those suggested by the WWW brain.

A browser user should be able to type http:// in URL field and wait. The cache could fill with those suggested by the WWW brain.

Please view draft-pkx-wwwogc-02. I have suggested a httpsso:// mode also. I am suggesting these modes for http for professional and it should be an interface for the user.

httpssoi - single signon with intelligence
httpauto - auto mode for browsing
httpssoiauto - Using the browser like a TV channel
httpiauto

Combination of http httpi httpsso and httpauto

So i launch my browser and type httpsso://www.service.com. In this mode for one session you hav to type your username and password only once. IT would let you relate multiple accounts in your first session.

If i launch and type http://www.site.info , it would be showing navigatable links that are not created manually. The WWW brain would suggest navigatable links. Imagine having a tablet or laptop while you are relaxing and you can cruise the intelligently by httpiauto://
If you type httpauto://www.site.info you can watch the site like a TV channel but manually directed by hardcoded URLs or URIs.

5. Acknowledgement

I have not eaten food today because I am a victim of cybercrime and I need that to be solved and does not have any one to acknowledge now. But I typed this remembering I suggested a search mechanism for an Information retrieval tool in 1992 where the user highlights the text on the viewing pane and invoke a Re search.
