Abstract

This document specifies SVG 1.2 RFC - an SVG profile for use in diagrams that may appear in RFCs - and considers some of the issues concerning the creation and use of such diagrams.

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at http://datatracker.ietf.org/drafts/current/.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on August 29, 2016.

Code Components extracted from this document must include Simplified BSD License text as described in Section 4.e of the Trust Legal Provisions and are provided without warranty as described in the Simplified BSD License.
1. Introduction

Over the last few years the RFC Editor has worked with the Internet community to develop specifications for changes in the format of RFCs. An outline of the resulting specifications was published as [RFC6949] in May 2013. Since then a Design Team has been working with the RFC Editor to flesh out those specifications. One aspect of the changes is to allow line drawings in RFCs; [RFC6949] says

"Graphics may include ASCII art and a more complex form to be defined, such as SVG line art [SVG]. Color and grayscale will not be accepted. RFCs must correctly display in monochromatic black-and-white to allow for monochrome displays, black-and-white printing, and support for visual disabilities."

SVG (Scalable Vector Graphics) has been developed by W3C, the World Wide Web Consortium; its current standard is SVG 1.1 Full [W3C.REC-SVG11-20110816]. This document defines SVG 1.2 RFC, an SVG profile (i.e. a subset of SVG) that is suitable for RFC line drawings.

Note that in RFCs, the text provides normative descriptions of protocols, systems, etc. Diagrams may be used to help explain concepts more clearly, but they provide supporting detail, and should not be considered to be complete specifications in themselves.
The details (particularly any vocabularies) described in this document are expected to change based on experience gained in implementing the RFC production center’s toolset. Revised documents will be published capturing those changes as the toolset is completed. Other implementors must not expect those changes to remain backwards-compatible with the details described in this document.

2. SVG 1.2 RFC: An SVG profile for RFCs

As a starting point for SVG 1.2 RFC, the Design Team decided to use SVG 1.2 Tiny [W3C.REC-SVGTiny12-20081222]. SVG 1.2 Tiny is an SVG subset intended to be implemented on small, mobile devices such as cellphones and smartphones. That should allow RFCs to be rendered well on such devices, especially those that have small screens. However, RFCs are self-contained documents that do not change once they are published. The use of SVG drawings in RFCs is intended to allow authors to create drawings that are simple to produce, and easier to understand than our traditional ‘ASCII Art’ ones. In short, we are also trying to improve access to the content in RFCs, so SVG drawings need to be kept as simple as possible.

Appendix A (below) provides a complete RELAX NG Compact (rnc) schema for SVG 1.2 RFC. It is derived from the SVG 1.2 schema, and is the formal definition of SVG 1.2 RFC. The remainder of this section gives a simplified - i.e. easier to read and understand - overview of SVG 1.2 RFC.

SVG can provide a complete User Interface, but within RFCs, all we need are simple diagrams that do not change once the RFC is published. Therefore, SVG RFC does not allow anything from the following sections in SVG Tiny 1.2 [W3C.REC-SVGTiny12-20081222]:

12 Multimedia
13 Interactivity
15 Scripting
16 Animation
18 Metadata
19 Extensibility

Note that SVG Tiny 1.2 elements may have many properties or attributes that are needed to support aspects of the above sections. Those are not allowed in SVG 1.2 RFC.

Considering the other sections in SVG Tiny 1.2 [W3C.REC-SVGTiny12-20081222]:

9 Basic Shapes
10 Text
Everything in these sections is allowed in SVG 1.2 RFC.

11 Painting: Filling, Stroking, Colors and Paint Servers
Anything relating to ‘color’ is not allowed in SVG 1.2 RFC, everything else is allowed. This is a requirement documented in [RFC6949].

14 Linking
SVG Tiny 1.2 allows internationalized IRIs in references. In SVG 1.2 RFC such links must be ASCII only. That should not cause problems, since one can just use the URI form of any IRI. Authors should try to use links only to URIs that are long-term stable.

17 Fonts
SVG 1.2 RFC only allows ‘serif’, ‘sans-serif’ and ‘monospace’ generic font families from the WebFonts facility, described in CSS 2.1, [W3C.REC-CSS2-20110607], section 15, Fonts. In particular, the SVG ‘font’ element is not allowed.

2.1. Elements, properties and attributes allowed in SVG 1.2 RFC
Elements, properties and attributes selected for SVG 1.2 RFC from [W3C.REC-SVGTiny12-20081222].

In the list below, elements and properties are listed on the left, and their allowed values are given in parentheses on the right.

<color> is the list of allowed colors, a black-and-white subset of the SVG color names.

<style> is a set of CSS attributes that are commonly used (by SVG drawing applications). They are not part of SVG Tiny 1.2, but are included here for compatibility. Note that
- There is no guarantee that any renderer will implement all the CSS attributes a drawing application may use.
- Authors will need to consider the compatibility of their drawings with rendering devices.

Elements:

svg (version=1.2, baseProfile=tiny, width, viewBox, preserveAspectRatio, snapshotTime, height, id, role)
g (label, class, id, role, fill, <style>, transform)
defs (id, role, fill)
title (id, role)
desc (id, role)
a (id, role, fill, transform)
use (x, y, href, xlink:href, id, role, fill, transform)
rect (x, y, width, height, rx, ry, stroke-miterlimit
id, role, fill, <style>, transform)
circle (cx, cy, r,
id, role, fill, <style>, transform)
ellipse (cx, cy, rx, ry,
id, role, fill, <style>, transform)
line (x1, y1, x2, y2, id, role, fill, transform)
polyline (points, id, role, fill, transform)
polygon (points, id, role, fill, <style>, transform)
text (x, y, rotate, space, id, role, fill, <style>,
transform)
tspan (x, y, id, role, fill)
textArea (x, y, width, height, auto, id, role, fill,
transform)
tbreak (id, role)
solidColor (id, role, fill)
linearGradient (gradientUnits, x1, y1, x2, y2, id, role, fill)
radialGradient (gradientUnits, cx, cy, r, id, role, fill)
stop (id, role, fill)
path (d, pathLength, stroke-miterlimit,
 id, role, fill, <style>, transform)

Properties: (most allow inherit as a value)

<color> (black, white, #000000, #ffffff, #FFFFFF)
stroke (<color>, none, currentColor)
stroke-width
stroke-linecap (butt, round, square)
stroke-linejoin (miter, round, bevel)
stroke-miterlimit
stroke-dasharray
stroke-dashoffset
stroke-opacity
vector-effect (non-scaling-stroke, none)
viewport-fill (none, currentColor)
viewport-fill-opacity
3. How to create SVG drawings

Many drawing packages can be used to create SVG drawings, for example Open Source packages Inkscape and Dia. Be aware that such packages may use SVG elements or attributes that are not allowed in SVG 1.2 RFC.

- For example, the ‘marker’ attribute is often used to place symbols such as arrowheads on lines, but ‘marker’ is not allowed in SVG
1.2 Tiny or SVG 1.2 RFC. In such cases one has to draw the arrowhead in another, simpler way.

- SVG clip paths are used to define a shape; objects outside that shape become invisible. The ‘clipPath’ element is not allowed in SVG 1.2 Tiny or SVG 1.2 RFC.

Diagrams produced with these packages may contain elements, their attributes or properties, or values of attributes or properties that are not allowed in SVG 1.2 RFC. We will need to provide a tool to strip out anything that is not allowed in SVG 1.2 RFC, or to replace disallowed values, e.g., ‘sans-serif’ for ‘Sans’ as values for ‘font-family’. Experience with a simple test version of a tool for this has shown that such deletion and replacement can be effective for making SVG files from drawing packages conform to SVG 1.2 RFC, without visibly changing the diagrams they produce.

The tool described above can also be used by Authors simply to check that their diagrams conform to SVG 1.2 RFC. To help with this, if visible changes do occur, the tool should produce a list of non-allowed keywords and the context in which they were found.

To include a diagram into an RFC, the xml2rfc (v3) tool will need to provide a way to include SVG drawings in Internet Drafts, as described in [XML2RFCv3] sections 2.5 and 2.67.

4. Accessibility Considerations

One of the long-term goals for RFCs is to make them more accessible, e.g. to sight-impaired readers. For diagrams, it would be useful for authors to provide alternative forms of the diagram, so that voice-reading software could be used to ‘talk through’ the diagram. Simply reading the SVG code for a complex diagram seems unlikely to work.

SVG 1.2 RFC allows SVG’s ‘title’ and ‘desc’ elements. ‘title’ provides a brief text caption for an SVG object (much like a figure caption), and ‘desc’ provides a longer text description of what the object actually represents. As well, the SVG ‘role’ attribute can be used to indicate to a browser how an SVG object is to be interpreted. Good suggestions on how to use these elements are given in [SVG-ACCESS-TIPS].

ARIA is a W3C Recommendation for using SVG to create ‘Accessible Rich Internet Applications.’ A helpful introduction to ARIA is provided by [SVG-ARIA-PRIMER], while [SVG-USING-ARIA] gives examples of how to use ARIA to enhance SVG accessibility.
5. Examples of diagrams common in RFCs

Another way to create SVG drawings is to write programs to draw them. For example, using python and its svgwrite module is a pleasant environment (for those who like writing code); this section presents a few examples of diagrams created in this way. Note that they are merely examples of typical diagrams from RFCs.

The SVG diagrams for this section can be seen at [This-I-D-with-SVG-included] along with an html version of this draft that includes the SVG diagrams.

5.1. Packet Layout Diagrams

Example: Figure 3 from [RFC0793].

5.2. Sequence Diagrams (1)

Example: Figure 6 from [ExpTrustedProxy].

5.3. Sequence Diagrams (2)

Example: Figure 3 from [RFC4321].

6. IANA Considerations

This document does not create a new registry nor does it register any values in existing registries; no IANA action is required.

7. Acknowledgements

Thanks to the RSE and the Design Team members for their helpful comments and suggestions for SVG 1.2 RFC, as well as from the wider IETF community.

8. Revision History [RFC Editor please delete]

version -02, 25 Feb 16:
   Changed the example metalanguage by removing the metalanguage code. The svg diagrams remain, as examples of diagrams that have appeared in earlier RFCs.

version -01, 26 Jan 16:
   rnc schema changed to use Joe Hildebrand’s version, github:
   "rename title element *reference* to svgTitle, in order to allow combination with XML2RFC schema. Note: XML element name does not change."
version -00, 6 Jan 16:
Now an IAB draft, changed name to draft-iab-svg-rfc-00.

version -13, 16 Oct 15:
Added Informative Reference to XML2RFC v3 draft on 'how to include SVG diagrams'.
Added Informative Reference to Nevil’s home page for a version of this I-D with its SVG diagrams included.
Added Informative References to RFC0793 and I-Ds for the example diagrams.
Changed 'colour' to 'color' so as to be consistent.
Fixed other typos (thanks to Dave Thaler for all these)!
Removed 'grey' color from example diagrams.

version -12, 24 Sep 15:
Appendix A added: a complete relax-ng compact (rnc) schema for SVG-1.2-RFC.
Section 2.1: Elements/attributes/properties table updated to match the schema in Appendix A.

version -11, 17 Aug 15:
Section 1: Fixed typo in "Details are expected to change" paragraph.

version -10, 14 Aug 15:
Section 1: Added "Details are expected to change" paragraph.

version -09, 31 Mar 15:
No changes, version number incremented to keep draft alive

version -08, 29 Sep 14:
Section 1: Changed comment about diagrams ‘not being normative’ to ‘not complete specifications in themselves.’
Section 2.1: Added SVG 1.2 Tiny ‘id’ attribute because most drawing packages use it in constructing drawings.
Section 2.1: Added SVG 1.2 Tiny ‘role’ attribute so that ARIA can use it.
Section 3: added comment about changes to xml2rfc required to include SVG diagrams.
Section 4: Added reference to svg-aria-primer.

version -07, 3 Jul 14:
Expanded text about Accessibility in 'how to create SVG drawings' section into 'Accessibility Considerations section. Added two SVG Accessibility references to support that.

version -06, 26 Jun 14:
Remove trailing / from URL in section 4; the html version on tools.ietf.org/html assumed the next word was part of that URL.

version -05, 25 Jun 14:
Improved section on ‘how to create SVG drawings’ By adding some text about which elements aren’t allowed in SVG 1.2 RFC.
Added more text describing the tool for checking, stripping out or replacing incompatible elements and attributes from an SVG file.

version -04, 30 Apr 14:
Fixed typos, used full references for two of the w3c refs - each had an author name using UTF8 characters.
Moved the Elements and Attributes appendix up earlier to make it sub-section 2.1.
Disclaimer added to the Meta-languages section.

version -03, 14 Apr 14:
Added two more example diagrams; a simple packet layout, and a diagram that uses lots of diagonal lines.

version -02, 12 Feb 14:
Added metalanguage example to make time-sequence drawings.

version -01, 11 Feb 14:
Allow links to ’long-term stable URIs’
Link URIs must be ASCII only
Need for tools to check SVG 1.2 RFC compatibility and to strip ‘unnecessary’ attributes explicitly stated.
Statement that drawings can’t be normative removed; Postscript-only RFCs already exist.
Added most attributes and elements to the Appendix.

version -00, 29 Jan 14:
Initial version, using content from Nevil’s emails to the Design Team.

Appendix A. RELAX NG Compact (rnc) Schema for SVG 1.2 RFC

The following rnc schema can be used to check whether an svg file conforms to SVG 1.2 RFC. For example, if this schema were contained in a file called SVG-1.2-RFC.rnc, the following command will test whether svg file diagram.svg is a conformant SVG 1.2 RFC drawing.

```
jing -c SVG-1.2-RFC.rnc diagram.svg
```

```---
SVG 1.2 RFC rnc schema; Nevil Brownlee, Thu 26 Jan 2016 (NZST)
```
