Deterministic Networking (DetNet) Configuration YANG Model
draft-ietf-detnet-yang-03

Abstract

This document contains the specification for Deterministic Networking flow configuration YANG Model. The model allows for provisioning of end-to-end DetNet service along the path without dependency on any signaling protocol.

The YANG module defined in this document conforms to the Network Management Datastore Architecture (NMDA).

Requirements Language

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in RFC 2119 [RFC2119].

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at https://datatracker.ietf.org/drafts/current/.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on January 9, 2020.
1. Introduction

Deterministic Networking (DetNet) [I-D.ietf-detnet-architecture] is defined to provide high-quality network service with extremely low packet loss rate, bounded low latency and jitter.
Information models for DetNet are categorized as flow models, service models and configuration models, which is defined in [I-D.ietf-detnet-flow-information-model].

Configuration models are used for DetNet topology discovery and DetNet flow configuration. This document defines a YANG model for DetNet flow configurations based on YANG data types and modeling language defined in [RFC6991] and [RFC7950]. A YANG model for topology discovery is defined in [I-D.ietf-detnet-topology-yang]. The DetNet configuration YANG model is designed for DetNet flow path establishment, flow status reporting, and DetNet functions configuration in order to achieve end-to-end bounded latency and zero congestion loss.

2. Terminologies

This document uses the terminologies defined in [I-D.ietf-detnet-architecture].

3. DetNet Configuration Model

DetNet flow configuration includes DetNet App-flow configuration, DetNet Service sub-layer configuration, and DetNet Forwarding sub-layer configuration and DetNet sub-network. The corresponding attributes used in different sub-layers are defined in Section 3.1, 3.2, 3.3, 3.4 respectively.

3.1. DetNet Application Flow Configuration Attributes

DetNet application flow is responsible for mapping between application flows and DetNet flows at the edge node (egress/ingress node). Where the application flows can be either layer 2 or layer 3 flows. To identify a flow at the User Network Interface (UNI), as defined in [I-D.ietf-detnet-flow-information-model], the following flow attributes are introduced:

- DetNet L3 Flow Identification, refers to Section 7.1.1 of [I-D.ietf-detnet-flow-information-model]
- DetNet L2 Flow Identification, refers to Section 7.1.2 of [I-D.ietf-detnet-flow-information-model]

Application flow can also do flow filtering and policing at the ingress to prevent the misbehaved flows from going into the network, which needs:

- Traffic Specification, refers to Section 7.2 of [I-D.ietf-detnet-flow-information-model]
3.2. DetNet Service Sub-layer Configuration Attributes

DetNet service functions, e.g., DetNet tunnel initialization/termination and service protection, are provided in DetNet service sub-layer. To support these functions, the following service attributes need to be configured:

- DetNet flow identification, refers to Section 8.1.3 of [I-D.ietf-detnet-flow-information-model].

- Service function indication, indicates which service function will be invoked at a DetNet edge, relay node or end station. (DetNet tunnel initialization or termination are default functions in DetNet service layer, so there is no need for explicit indication.)

- Flow Rank, refers to Section 8.3 of [I-D.ietf-detnet-flow-information-model].

- Service Rank, refers to Section 16 of [I-D.ietf-detnet-flow-information-model].

- Service Sub-layer, refers to Section 4.5 and Section 4.6 of [I-D.ietf-detnet-mpls]

- Forwarding Sub-layer, refers to Section 4.3 of [I-D.ietf-detnet-ip] and Section 4.5 and Section 4.6 of [I-D.ietf-detnet-mpls]

3.3. DetNet Forwarding Sub-layer Configuration Attributes

As defined in [I-D.ietf-detnet-architecture], DetNet forwarding sub-layer optionally provides congestion protection for DetNet flows over paths provided by the underlying network. Explicit route is another mechanism that is used by DetNet to avoid temporary interruptions caused by the convergence of routing or bridging protocols, and it is also implemented at the DetNet forwarding sub-layer.

To support congestion protection and explicit route, the following transport layer related attributes are necessary:

- Traffic Specification, refers to Section 7.2 of [I-D.ietf-detnet-flow-information-model]. It may used for bandwidth reservation, flow shaping, filtering and policing.

- Explicit path, existing explicit route mechanisms can be reused. For example, if Segment Routing (SR) tunnel is used as the transport tunnel, the configuration is mainly at the ingress node.
of the transport layer; if the static MPLS tunnel is used as the transport tunnel, the configurations need to be at every transit node along the path; for pure IP based transport tunnel, it’s similar to the static MPLS case.

3.4. DetNet Sub-network Configurations Attributes

TBD

4. Overview of DetNet YANG Structure

4.1. DetNet YANG Structure Considerations

The picture shows that the general structure of the DetNet YANG Model:

```
+-----------+       +------------------+
| ietf-detnet|       |                   |
+-----------+       |                   |
|           |       |                   |
+-------------+ +-----+-----+ +-------+------+ +-----+-----+
|             |               |              |
+-----+-----+ |service s-l| |forwarding s-l| |sub-network|
| App Flows | +-----------+ +--------------+ +-----------+
+-----------+ +-----------+ +--------------+ +-----------+
```

There are four instances in DetNet YANG Model: App-flow instance, service sub-layer instance, forwarding sub-layer instance and sub-network instance, respectively corresponding to four parts of DetNet functions defined in section 3. In each instance, there are four elements: name, in-segments, out-segments and operations, which means:

- Name: indicates the key value of the instance identification.
- In-segments: indicates the key value of identification, e.g., Layer 2 App flow identification, Layer 3 App flow identification and DetNet flow identification.
- Out-segments: indicates the information of DetNet processing(e.g., DetNet forwarding, DetNet header Encapsulation) and the mapping relationship to the lower sub-layer/sub-network.

These elements are different when the technologies used for the specific instance is different. So this structure is abstract, which
allows for different technology specifics as defined in different data plane drafts.

4.2. DetNet YANG Structure

4.2.1. YANG Structure of Application Flow

The picture below shows that the general YANG structure of DetNet App-flow:

```yang
++rw app-flow
  +-rw operations
    |  +-rw sequence-number
    |      +-rw sequence-number-generation-type? sequence-number-generation-type
    |      +-rw sequence-number-length? uint8
    +-rw in-segments
      +-rw app-flow-type? flow-type-ref
      +-rw source-mac-address? yang:mac-address
      +-rw destination-mac-address? yang:mac-address
      +-rw ethertype? eth:ethertype
      +-rw vlan-id? uint16
      +-rw pcp? uint8
      +-rw src-ipv4-prefix inet:ipv4-prefix
      +-rw dest-ipv4-prefix inet:ipv4-prefix
      +-rw protocol uint8
      +-rw dscp? uint8
      +-rw dscp-bitmask? uint8
      +-rw src-ipv6-prefix inet:ipv6-prefix
      +-rw dest-ipv6-prefix inet:ipv6-prefix
      +-rw next-header uint8
      +-rw traffic-class? uint8
      +-rw traffic-class-bitmask? uint8
      +-rw flow-label? inet:ipv6-flow-label
      +-rw flow-label-flag? boolean
      +-rw lower-source-port? inet:port-number
      +-rw upper-source-port? inet:port-number
      +-rw lower-destination-port? inet:port-number
      +-rw upper-destination-port? inet:port-number
    +-rw out-segments
      +-rw detnet-service-sub-layer? lower-layer-ref
```

4.2.2. YANG Structure of DetNet Service Sub-layer

The picture shows that the general YANG structure of DetNet Service Sub-layer:

```yang
++rw service-sub-layer
  |  ++rw operations
```
| +--rw service-operation |
| | +--rw service-operation-type?   service-operation-ref |
| +--rw service-protection |

| +--rw detnet-service-list* [detnet-service-index] |
| | +--rw detnet-service-index     uint8 |
| | +--rw src-ipv4-prefix             inet:ipv4-prefix |
| | +--rw dest-ipv4-prefix            inet:ipv4-prefix |
| | +--rw protocol                    uint8 |
| | +--rw dscp?                       uint8 |
| | +--rw dscp-bitmask?               uint8 |
| | +--rw src-ipv6-prefix             inet:ipv6-prefix |
| | +--rw dest-ipv6-prefix            inet:ipv6-prefix |
| | +--rw next-header                 uint8 |
| | +--rw traffic-class?              uint8 |
| | +--rw traffic-class-bitmask?      uint8 |
| | +--rw flow-label?                 inet:ipv6-flow-label |
| +--rw flow-label-flag?            boolean |
| +--rw mpls-flow-identification |
| | +--rw platform-label-flag?        boolean |
| +--rw non-platform-label-space |
| | +--rw incoming-interface?         if:interface-ref |
| +--rw non-platform-label-stack* [index] |
| | +--rw index     uint8 |
| | +--rw label?    rt-type:mpls-label |
| | +--rw tc?        uint8 |
| +--rw platform-label-space |
| +--rw label?    rt-type:mpls-label |
| +--rw tc?        uint8 |
| +--rw out-segments |
| +--rw detnet-service-processing-type?   flow-type-ref |
| +--rw detnet-service-encapsulation |
| +--rw detnet-service-processing-index     uint32 |
| +--rw ip-flow |
| | +--rw ipv4-flow |
| | | +--rw src-ipv4-address             inet:ipv4-address |
| | | +--rw dest-ipv4-address             inet:ipv4-address |
| | | +--rw protocol                    uint8 |
| | | +--rw dscp?                       uint8 |
| | +--rw ipv6-flow |
| | | +--rw src-ipv6-address             inet:ipv6-address |
| | | +--rw dest-ipv6-address             inet:ipv6-address |
| | | +--rw next-header                 uint8 |
| | | +--rw traffic-class?              uint8 |
| | | +--rw flow-label?                 inet:ipv6-flow-label |
4.2.3. YANG Structure of DetNet Forwarding Sub-layer

The picture shows that the general YANG structure of DetNet Forwarding Sub-layer:

```yaml
+-rw forwarding-sub-layer
  |  +-rw operations
  |     |  +-rw forwarding-operation
  |     |     |  +-rw forwarding-operation-type? forwarding-operation-ref
  |     +-rw resource-allocate
  |        |  +-rw interval? uint32
  |        |  +-rw max-packets-per-interval? uint32
  |        |  +-rw max-payload-size? uint32
  |        |  +-rw average-packets-per-interval? uint32
  |        |  +-rw average-payload-size? uint32
  |     |  +-rw qos
  |     |     |  +-rw detnet-forwarding-type? flow-type-ref
  |     |     |  +-rw src-ipv4-prefix inet:ipv4-prefix
  |     |     |  +-rw dest-ipv4-prefix inet:ipv4-prefix
  |     |     |  +-rw protocol uint8
  |     |     |  +-rw dscp? uint8
  |     |     |  +-rw dscp-bitmask? uint8
  |     |     |  +-rw src-ipv6-prefix inet:ipv6-prefix
  |     |     |  +-rw dest-ipv6-prefix inet:ipv6-prefix
  |     |     |  +-rw next-header uint8
  |     |     |  +-rw traffic-class? uint8
  |     |     |  +-rw traffic-class-bitmask? uint8
  |     |     |  +-rw flow-label? inet:ipv6-flow-label
  |     |     |  +-rw flow-label-flag? boolean
  |     |     |  +-rw mpls-flow-identification
  |     |        |  +-rw platform-label-flag? boolean
  |     |        |  +-rw non-platform-label-space
  |     |     |     |  +-rw incoming-interface? if:interface-ref
  |     |     |     |  +-rw non-platform-label-stack* [index]
```
4.2.4. YANG Structure of DetNet sub-network

6. Open Issues

There are some open issues that are still under discussion:

- The Relationship with 802.1 TSN YANG models is TBD. TSN YANG models include: P802.1Qcw, which defines TSN YANG for Qbv, Qbu, and Qci, and P802.1CBcv, which defines YANG for 802.1CB. The possible problem here is how to avoid possible overlap among yang models defined in IETF and IEEE. A common YANG model may be defined in the future to shared by both TSN and DetNet. More discussion are needed here.

- How to support DetNet OAM is TBD.

These issues will be resolved in the following versions of the draft.

7. IANA Considerations

This document makes no request of IANA.

Note to RFC Editor: this section may be removed on publication as an RFC.

8. Security Considerations

<TBD>
