HTTP Range Requests

draft-ietf-httpbis-range-01

Abstract

The Hypertext Transfer Protocol (HTTP) is a stateless application-
level protocol for distributed, collaborative, hypertext information
systems. This document formerly defined range requests and the rules
for constructing and combining responses to those requests, which has
since been moved to the core HTTP Semantics document.

Editorial Note

This note is to be removed before publishing as an RFC.

Discussion of this draft takes place on the HTTP working group
mailing list (ietf-http-wg@w3.org), which is archived at
<https://lists.w3.org/Archives/Public/ietf-http-wg/>.

Working Group information can be found at <https://httpwg.org/>;
source code and issues list for this draft can be found at

The changes in this draft are summarized in Appendix A.

Status of This Memo

This Internet-Draft is submitted in full conformance with the
provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering
Task Force (IETF). Note that other groups may also distribute
working documents as Internet-Drafts. The list of current Internet-
Drafts is at https://datatracker.ietf.org/drafts/current/.

Internet-Drafts are draft documents valid for a maximum of six months
and may be updated, replaced, or obsoleted by other documents at any
time. It is inappropriate to use Internet-Drafts as reference
material or to cite them other than as "work in progress."
1. Introduction

Hypertext Transfer Protocol (HTTP) clients often encounter interrupted data transfers as a result of canceled requests or dropped connections. This document defined HTTP/1.1 range requests, partial responses, and the multipart/byteranges media type.

The entire content of this document (previously in [RFC2616] and [RFC7233]) has been moved to [Semantics].
2. References

2.1. Normative References

2.2. Informative References

Appendix A. Changes from RFC 7233

All content has been moved to [Semantics].

Acknowledgments

See Appendix "Acknowledgments" of [Semantics].
