A Yang Data Model for IGMP and MLD Snooping
draft-ietf-pim-igmp-mld-snooping-yang-08.txt

Abstract

This document defines a YANG data model that can be used to configure and manage Internet Group Management Protocol (IGMP) and Multicast Listener Discovery (MLD) Snooping devices. The YANG module in this document conforms to Network Management Datastore Architecture (NMDA).

Status of this Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

The list of current Internet-Drafts can be accessed at http://www.ietf.org/ietf/1id-abstracts.txt

The list of Internet-Draft Shadow Directories can be accessed at http://www.ietf.org/shadow.html

1. Introduction

This document defines a YANG [RFC6020] data model for the management of Internet Group Management Protocol (IGMP) and Multicast Listener Discovery (MLD) Snooping devices.

The YANG module in this document conforms to the Network Management Datastore Architecture defined in [RFC8342]. The "Network Management Datastore Architecture" (NMDA) adds the ability to inspect the current operational values for configuration, allowing clients to use identical paths for retrieving the configured values and the operational values.

1.1. Terminology

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "NOT RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in BCP 14 [RFC2119].

The terminology for describing YANG data models is found in [RFC6020].

1.2. Tree Diagrams

A simplified graphical representation of the data model is used in this document. The meaning of the symbols in these diagrams is as follows:

- Brackets "[" and "]" enclose list keys.

- Abbreviations before data node names: "rw" means configuration (read-write), and "ro" means state data (read-only).

- Symbols after data node names: "?" means an optional node, "!" means a presence container, and "*" denotes a list and leaf-list.

- Parentheses enclose choice and case nodes, and case nodes are also marked with a colon (":").

- Ellipsis ("...") stands for contents of subtrees that are not shown.

2. Design of Data Model

The model covers Considerations for Internet Group Management Protocol (IGMP) and Multicast Listener Discovery (MLD) Snooping Switches [RFC4541].
The goal of this document is to define a data model that provides a common user interface to IGMP and MLD Snooping.

2.1. Overview

The IGMP and MLD Snooping YANG module defined in this document has all the common building blocks for the IGMP and MLD Snooping protocol.

The YANG module includes IGMP and MLD Snooping instance definition, instance reference in the scenario of BRIDGE and L2VPN. The module also includes the RPC methods for clearing IGMP and MLD Snooping group tables.

This YANG module conforms to Network Management Datastore Architecture (NMDA) [RFC8342]. This NMDA architecture provides an architectural framework for datastores as they are used by network management protocols such as NETCONF [RFC6241], RESTCONF [RFC8040] and the YANG [RFC7950] data modeling language.

2.2. IGMP Snooping Instances

All the IGMP Snooping related attributes have been defined in the igmp-snooping-instance. The read-write attribute means configurable data. The read-only attribute means state data.

One igmp-snooping-instance could be referenced in one BRIDGE instance or L2VPN instance. One igmp-snooping-instance corresponds to one BRIDGE instance or L2VPN instance.

The value of scenario in igmp-snooping-instance is bridge or l2vpn. When it is bridge, the igmp-snooping-instance will be referenced in the BRIDGE scenario. When it is l2vpn, the igmp-snooping-instance will be referenced in the L2VPN scenario.

The value of bridge-mrouter-interface, l2vpn-mrouter-interface-ac, l2vpn-mrouter-interface-pw are filled by snooping device dynamically. They are different from static-bridge-mrouter-interface, static-l2vpn-mrouter-interface-ac, and static-l2vpn-mrouter-interface-pw which are configured statically.

The attributes under the interfaces show the statistics of IGMP Snooping related packets.

2.3. MLD Snooping Instances

The YANG module defines mld-snooping-instance which could be referenced in the BRIDGE or L2VPN scenario to enable MLD Snooping.

The mld-snooping-instance is the same as IGMP snooping except changing IPv4 addresses to IPv6 addresses.
+--rw static-l2vpn-mrouter-interface-ac*   if:interface-ref (static-mrouter-interface)?

2.4. IGMP and MLD Snooping Instances Reference

The `igmp-snooping-instance` could be referenced in the scenario of BRIDGE or L2VPN to configure the IGMP Snooping.

For the BRIDGE scenario this model augments `/dot1q:bridges/dot1q:bridge` to reference `igmp-snooping-instance`. It means IGMP Snooping is enabled in the whole bridge.

It also augments `/dot1q:bridges/dot1q:bridge/dot1q:component/dot1q:bridge-vlan/dot1q:vlan` to reference `igmp-snooping-instance`. It means IGMP Snooping is enabled in the certain VLAN of the bridge.

```
 augment /dot1q:bridges/dot1q:bridge: 
    +--rw igmp-snooping-instance?   igmp-snooping-instance-ref
    +--rw mld-snooping-instance?    mld-snooping-instance-ref
```

For the L2VPN scenario this model augments `/ni:network-instances/ni:network-instance/ni:ni-type/l2vpn:l2vpn` to reference `igmp-snooping-instance`. It means IGMP Snooping is enabled in the specified l2vpn instance.

```
 augment /ni:network-instances/ni:network-instance/ni:ni-type/l2vpn:l2vpn: 
    +--rw igmp-snooping-instance?   igmp-snooping-instance-ref
    +--rw mld-snooping-instance?    mld-snooping-instance-ref
```

The `mld-snooping-instance` could be referenced in concurrence with `igmp-snooping-instance` to configure the MLD Snooping.

2.5. IGMP and MLD Snooping RPC

IGMP and MLD Snooping RPC clears the specified IGMP and MLD Snooping group tables.
rpcs:
   +---x clear-igmp-snooping-groups {rpc-clear-groups}? 
   |   +---w input 
   |   |   +---w name?    igmp-mld-snooping-instance-ref 
   |   |   |       {feature-igmp-snooping}? 
   |   |   +---w group?    rt-types:ipv4-multicast-group-address 
   |   |   +---w source?   rt-types:ipv4-multicast-source-address 
   +---x clear-mld-snooping-groups {rpc-clear-groups}? 
   +---w input 
   +---w name?    igmp-mld-snooping-instance-ref 
   |       {feature-mld-snooping}? 
   +---w group?    rt-types:ipv6-multicast-group-address 
   +---w source?   rt-types:ipv6-multicast-source-address

<CODE ENDS>
4. Security Considerations

The YANG module specified in this document defines a schema for data that is designed to be accessed via network management protocols such as NETCONF [RFC6241] or RESTCONF [RFC8040]. The lowest NETCONF layer is the secure transport layer, and the mandatory-to-implement secure transport is Secure Shell (SSH) [RFC6242]. The lowest RESTCONF layer is HTTPS, and the mandatory-to-implement secure transport is TLS [RFC5246].

The NETCONF access control model [RFC6536] provides the means to restrict access for particular NETCONF or RESTCONF users to a preconfigured subset of all available NETCONF or RESTCONF protocol operations and content.

There are a number of data nodes defined in this YANG module that are writable/creatable/deletable (i.e., config true, which is the default). These data nodes may be considered sensitive or vulnerable in some network environments. Write operations (e.g., edit-config) to these data nodes without proper protection can have a negative effect on network operations. These are the subtrees and data nodes and their sensitivity/vulnerability:

The subtrees under /dot1q:bridges/dot1q:bridge

- /dot1q:bridges/dot1q:bridge/ims:igmp-snooping-instance
- /dot1q:bridges/dot1q:bridge/ims:mld-snooping-instance

The subtrees under

- /dot1q:bridges/dot1q:bridge/dot1q:component/dot1q:bridge-vlan/dot1q:vlan

- /dot1q:bridges/dot1q:bridge/dot1q:component/dot1q:bridge-vlan/dot1q:vlan/ims:igmp-snooping-instance
- /dot1q:bridges/dot1q:bridge/dot1q:component/dot1q:bridge-vlan/dot1q:vlan/ims:mld-snooping-instance

The subtrees under /ni:network-instances/ni:network-instance/ni:ni-type/l2vpn:l2vpn

Unauthorized access to any data node of these subtrees can adversely affect the IGMP & MLD Snooping subsystem of both the local device and the network. This may lead to network malfunctions, delivery of packets to inappropriate destinations, and other problems.

Some of the readable data nodes in this YANG module may be considered sensitive or vulnerable in some network environments. It is thus important to control read access (e.g., via get, get-config, or notification) to these data nodes. These are the subtrees and data nodes and their sensitivity/vulnerability:

Unauthorized access to any data node of these subtrees can disclose the operational state information of IGMP & MLD Snooping on this device.

Some of the RPC operations in this YANG module may be considered sensitive or vulnerable in some network environments. It is thus important to control access to these operations. The IGMP & MLD Snooping Yang module support the "clear-igmp-snooping-groups" and "clear-mld-snooping-groups" RPCs. If it meets unauthorized RPC operation invocation, the IGMP and MLD Snooping group tables will be cleared unexpectedly.

5. IANA Considerations

RFC Ed.: In this section, replace all occurrences of 'XXXX' with the actual RFC number (and remove this note).

This document registers the following namespace URIs in the IETF XML registry [RFC3688]:

---

Registrant Contact: The IESG.
XML: N/A, the requested URI is an XML namespace.
---

Zhao & Liu, etc Expires December 09, 2019 [Page 32]
This document registers the following YANG modules in the YANG Module Names registry [RFC7950]:

```
name:         ietf-igmp-mld-snooping
prefix:       ims
reference:    RFC XXXX
```

|       |  R2  |  R3  |
|       |     |     |
|       |     |     |
|       |     |     |
|       |     |     |
|       |eth2/2|eth3/2|
|       |     |     |
|       |     |     |
|       |     |     |
|       |     |     |
|       |     |     |
|       +--------+--+   +---+--------+|
|       | Receiver1 |   |  Receiver2 |
|       |-----------|   |------------|
```

The configuration data for R1 in the above figure could be as follows:

```
{
   "ietf-interfaces:interfaces":{
      "interface":[
         {
            "name":"eth1/1",
            "type":"iana-if-type:ethernetCsmacd"
         }
      ]
   },
   "ietf-routing:routing":{
      "control-plane-protocols":{
         "control-plane-protocol":[
            {
               "type":"ietf-igmp-mld-snooping:igmp-snooping",
               "type":"ietf-igmp-mld-snooping:igmp-snooping"
            }
         ]
      }
   }
}
```
The corresponding operational state data for R1 could be as follows:

```json
{
  "ietf-interfaces:interfaces": {
    "interface": [
      {
        "name": "eth1/1",
        "type": "iana-if-type:ethernetCsmacd",
        "oper-status": "up",
        "statistics": {
          "discontinuity-time": "2018-05-23T12:34:56-05:00"
        }
      }
    ],
    "ietf-routing:routing": {
      "control-plane-protocols": {
        "control-plane-protocol": []
      }
    }
  }
}
```
{"type": "ietf-igmp-mld-snooping:igmp-snooping",
"name": "bis1",
"ietf-igmp-mld-snooping:igmp-snooping-instance": {
"scenario": "ietf-igmp-mld-snooping:bridge",
"enable": true
}
}" ieee802-dot1q-bridge:bridges": {

}
A.2 L2VPN scenario

This section contains an example for L2VPN scenario in the JSON encoding [RFC7951], containing both configuration and state data.

```
+-----------+
|  Source   |
+-----------+
|
+-----------+-----------------+----------------------------
|eth1/1     |
|et1/2      |            |eth1/3
|          |    |          |
|eth2/1     |            |eth2/3
|          |    |          |
+-----------+-----------------+----------------------------

The configuration data for R1 in the above figure could be as follows:

```
{
  "ietf-interfaces:interfaces": {
    "interface": [
      {
        "name": "eth1/1",
        "type": "iana-if-type:ethernetCsmacd"
      }
    ],
    "ietf-pseudowires:pseudowires": {
      "pseudowire": [
        {
          "name": "pw2"
        },
        {
          "name": "pw3"
        }
      ]
    }
  }
}``
```
