Abstract

The PKIX certificate format, and many associated formats, are expressed using ASN.1. The current ASN.1 modules conform to the 1988 version of ASN.1. This document updates those ASN.1 modules to conform to the 2002 version of ASN.1. There are no bits-on-the-wire changes to any of the formats; this is simply a change to the syntax.

Status of this Memo

This Internet-Draft is submitted to IETF in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

The list of current Internet-Drafts can be accessed at http://www.ietf.org/ietf/1id-abstracts.txt.

The list of Internet-Draft Shadow Directories can be accessed at http://www.ietf.org/shadow.html.

This Internet-Draft will expire on September 8, 2010.

Authors’ Addresses ................................. 122
1. Introduction

Some developers would like the IETF to use the latest version of
ASN.1 in its standards. Most of the RFCs that relate to security
protocols still use ASN.1 from the 1988 standard, which has been
deprecated. This is particularly true for the standards that relate
to PKIX, CMS, and S/MIME.

This document updates the following RFCs to use ASN.1 modules that
conform to the 2002 version of ASN.1 [ASN1-2002]. Note that not all
the modules are updated; some are included to simply make the set
complete.

- RFC 2560, PKIX Online Certificate Status Protocol (OCSP) [RFC2560]
- RFC 2986, PKCS #10 certificate request [RFC2986]
- RFC 3279, PKIX algorithms and identifier [RFC3279]
- RFC 3852, contains PKIX attribute certificates, version 1
  [RFC3852]
- RFC 4055, Additional Algorithms and Identifiers for RSA
  Cryptography [RFC4055]
- RFC 4210, PKIX CMP (Certificate Management Protocol) [RFC4210]
- RFC 4211, PKIX CRMF (Certificate Request Message Format) [RFC4211]
- RFC 5055, PKIX SCVP (Server-based Certificate Validation Protocol)
  [RFC5055]
- RFC 5272, Certificate Management over CMS (CMC) [RFC5272]
- RFC 5280, PKIX certificate and CRL profile [RFC5280] (both the
  implicit and explicit modules)
- RFC 5755, PKIX attribute certificates, version 2 [RFC5755]

Note that some of the modules in this document get some of their
definitions from places different than the modules in the original
RFCs. The idea is that these modules, when combined with the modules
in [NEW-CMS-SMIME] can stand on their own and do not need to import
definitions from anywhere else. Also note that the ASN.1 modules in
this document have references in their text comments that need to be
looked up in original RFCs, and that some of those references may
have already been superseded by later RFCs.
The document also includes a module of common definitions called "PKIX-CommonTypes". These definitions are used here and in [NEW-CMS-SMIME].

The document also includes a module of common definitions called "AlgorithmInformation". These definitions are used here and in [NEW-CMS-SMIME].

1.1. Design Notes

The modules in this document use the object model available in the 2002 ASN.1 documents to a great extent. Objects for each of the different algorithm types are defined. Also, all of the places where in the 1988 ASN.1 syntax had ANY holes to allow for variable syntax now have objects.

Much like the way that the PKIX and S/MIME working groups use the prefix of id- for object identifiers, this document has also adopted a set of two, three, and four letter prefixes to allow for quick identification of the type of an object based on its name. This allows, for example, the same back half of the name to be used for the different objects. Thus, "id-sha1" is the object identifier, while "mda-sha1" is the message digest object for "sha1".

One or more object sets for the different type of algorithms are defined. A single consistent name for each of the different algorithm types is used. For example, an object set named PublicKeys might contain the public keys defined in that module. If no public keys are defined, then the object set is not created. When referencing these objects sets when imported, one needs to be able to disambiguate between the different modules. This is done by using both the module name (as specified in the IMPORT statement) and the object set name. For example, in the module for RFC 5280:

PublicKeys FROM PKIXAlgs-2008 { 1 3 6 1 5 5 7 0 995 }
PublicKeys FROM PKIX1-PSS-OAEP-Algorithms { 1 3 6 1 5 5 7 33 }

2. ASN.1 Module PKIX-CommonTypes

This section contains a module that is imported by many other modules in this document and in [NEW-CMS-SMIME]. This module does not come from any existing RFC.

PKIX-CommonTypes-2009
DEFINITIONS EXPLICIT TAGS ::=  
BEGIN  
-- ATTRIBUTE  
-- Describe the set of data associated with an attribute of some type  
--  &id is an OID identifying the attribute  
--  &Type is the ASN.1 type structure for the attribute; not all  
--    attributes have a data structure, so this field is optional  
--  &minCount contains the minimum number of time the attribute can  
--    occur in an AttributeSet  
--  &maxCount contains the maximum number of times the attribute can  
--    appear in an AttributeSet  
--  Note: this cannot be automatically enforced as the field  
--    cannot be defaulted to MAX.  
--  &equality-match contains information about how matching should be  
--    done  
--  Currently we are using two different prefixes for attributes.  
--  at- for certificate attributes  
--  aa- for CMS attributes  
--  
ATTRIBUTE ::= CLASS {  
  &id OBJECT IDENTIFIER UNIQUE,  
  &Type OPTIONAL,

-- cap- S/MIME Capabilities

ParamOptions ::= ENUMERATED {
  required, -- Parameters MUST be encoded in structure
  preferredPresent, -- Parameters SHOULD be encoded in structure
  preferredAbsent, -- Parameters SHOULD NOT be encoded in structure
  absent, -- Parameters MUST NOT be encoded in structure
  inheritable, -- Parameters are inherited if not present
  optional, -- Parameters MAY be encoded in the structure
  ...
}

-- DIGEST-ALGORITHM
--
-- Describes the basic information for ASN.1 and a digest
-- algorithm.
--
-- &id - contains the OID identifying the digest algorithm
-- &Params - contains the type for the algorithm parameters,
-- if present; absent implies no parameters
-- &paramPresence - parameter presence requirement
--
-- Additional information such as the length of the hash could also
-- be encoded.
--
-- Example:
-- sha1 DIGEST-ALGORITHM ::= {
--  IDENTIFIER id-sha1
--  PARAMS TYPE NULL ARE preferredAbsent
-- }

DIGEST-ALGORITHM ::= CLASS {
  &id OBJECT IDENTIFIER UNIQUE,
  &Params OPTIONAL,
  &paramPresence ParamOptions DEFAULT absent
} WITH SYNTAX {
  IDENTIFIER &id
[PARAMS [TYPE &Params] [ARE &paramPresence] ]

-- SIGNATURE-ALGORITHM
--
-- Describes the basic properties of a signature algorithm
--
-- &id - contains the OID identifying the signature algorithm
-- &Value - contains a type definition for the value structure of
-- the signature
-- &Params - contains the type for the algorithm parameters,
--          if present; absent implies no parameters
-- &paramPresence - parameter presence requirement
-- &HashSet - The set of hash algorithms used with this
--          signature algorithm
-- &PublicKeySet - the set of public key algorithms for this
--          signature algorithm
-- &smimeCaps - contains the object describing how the S/MIME
--          capabilities are presented.
--
-- Example:
-- sig-RSA-PSS SIGNATURE-ALGORITHM ::= {
--     IDENTIFIER id-RSASSA-PSS
--     PARAMS TYPE RSASSA-PSS-params ARE required
--     HASHES { mda-sha1 | mda-md5, ... } (mda-md5)
--     PUBLIC-KEYS { pk-rsa | pk-rsa-pss } (pk-rsa)
--
-- SIGNATURE-ALGORITHM ::= CLASS {
--     &id             OBJECT IDENTIFIER UNIQUE,
--     &Value          OPTIONAL,
--     &Params         OPTIONAL,
--     &paramPresence  ParamOptions DEFAULT absent,
--     &HashSet        DIGEST-ALGORITHM OPTIONAL,
--     &PublicKeySet   PUBLIC-KEY OPTIONAL,
--     &smimeCaps      SMIME-CAPS OPTIONAL
-- } WITH SYNTAX {
--     IDENTIFIER &id
--     [VALUE &Value]
--     [PARAMS [TYPE &Params] ARE &paramPresence ]
--     [HASHES &HashSet]
--     [PUBLIC-KEYS &PublicKeySet]
--     [SMIME-CAPS &smimeCaps]
--
-- PUBLIC-KEY
--
-- Describes the basic properties of a public key
PUBLIC-KEY ::= CLASS {
    &id             OBJECT IDENTIFIER UNIQUE,
    &KeyValue       OPTIONAL,
    &Params         OPTIONAL,
    &paramPresence  ParamOptions DEFAULT absent,
    &keyUsage       KeyUsage OPTIONAL,
    &PrivateKey     OPTIONAL
} WITH SYNTAX {
    IDENTIFIER &id
    [KEY &KeyValue]
    [PARAMS [TYPE &Params] ARE &paramPresence]
    [CERT-KEY-USAGE &keyUsage]
    [PRIVATE-KEY &PrivateKey]
}

-- KEY-TRANSPORT
--
-- Describes the basic properties of a key transport algorithm
--
-- &id - contains the OID identifying the key transport algorithm
-- &Params - contains the type for the algorithm parameters,
--    if present; absent implies no parameters
-- &paramPresence - parameter presence requirement
-- &PublicKeySet - specify which public keys are used with
--    this algorithm
-- &smimeCaps - contains the object describing how the S/MIME
--    capabilities are presented.
-- Example:
-- rsaTransport KEY-TRANSPORT ::= {
--     IDENTIFIER &id
--     PARAMS TYPE NULL ARE required
--     PUBLIC-KEYS { pk-rsa | pk-rsa-pss }
-- }

KEY-TRANSPORT ::= CLASS {
    &id                OBJECT IDENTIFIER UNIQUE,
    &Params            OPTIONAL,
    &paramPresence     ParamOptions DEFAULT absent,
    &PublicKeySet      PUBLIC-KEY OPTIONAL,
    &smimeCaps         SMIME-CAPS OPTIONAL
} WITH SYNTAX {
    IDENTIFIER &id
    [PARAMS [TYPE &Params] ARE &paramPresence]
    [PUBLIC-KEYS &PublicKeySet]
    [SMIME-CAPS &smimeCaps]
}

-- KEY-AGREE
--
-- Describes the basic properties of a key agreement algorithm
--
-- &id - contains the OID identifying the key agreement algorithm
-- &Params - contains the type for the algorithm parameters,
--          if present; absent implies no parameters
-- &paramPresence - parameter presence requirement
-- &PublicKeySet - specify which public keys are used with
--                 this algorithm
-- &Ukm - type of user keying material used
-- &ukmPresence - specifies the requirements to define the UKM field
-- &smimeCaps - contains the object describing how the S/MIME
--              capabilities are presented.
--
-- Example:
-- dh-static-ephemeral KEY-AGREE ::= {
--     IDENTIFIER id-alg-ESDH
--     PARAMS TYPE KeyWrapAlgorithm ARE required
--     -- user key material is not ASN.1-encoded.
--     PUBLIC-KEYS {
--         (IDENTIFIER dh-public-number KEY DHPublicKey
--         PARAMS TYPE DHDomainParameters ARE inheritable )
--     }
--     -- UKM should be present but is not separately ASN.1-encoded
--     UKM ARE preferredPresent
-- }

Hoffman & Schaad       Expires September 8, 2010              [Page 13]
KEY-AGREE ::= CLASS {
    &id OBJECT IDENTIFIER UNIQUE,
    &Params OPTIONAL,
    &paramPresence ParamOptions DEFAULT absent,
    &PublicKeySet PUBLIC-KEY OPTIONAL,
    &Ukm OPTIONAL,
    &ukmPresence ParamOptions DEFAULT absent,
    &smimeCaps SMIME-CAPS OPTIONAL
} WITH SYNTAX {
    IDENTIFIER &id
    [PARAMS [TYPE &Params] ARE &paramPresence]
    [PUBLIC-KEYS &PublicKeySet]
    [UKM [TYPE &Ukm] ARE &ukmPresence]
    [SMIME-CAPS &smimeCaps]
}

-- KEY-WRAP
--
-- Describes the basic properties of a key wrap algorithm
--
-- &id - contains the OID identifying the key wrap algorithm
-- &Params - contains the type for the algorithm parameters,
--    if present; absent implies no parameters
-- &paramPresence - parameter presence requirement
-- &smimeCaps - contains the object describing how the S/MIME
--    capabilities are presented.
--
-- Example:
-- cms3DESwrap KEY-WRAP ::= {
--    IDENTIFIER id-alg-CMS3DESwrap
--    PARAMS TYPE NULL ARE required
-- }

KEY-WRAP ::= CLASS {
    &id OBJECT IDENTIFIER UNIQUE,
    &Params OPTIONAL,
    &paramPresence ParamOptions DEFAULT absent,
    &smimeCaps SMIME-CAPS OPTIONAL
} WITH SYNTAX {
    IDENTIFIER &id
    [PARAMS [TYPE &Params] ARE &paramPresence]
    [SMIME-CAPS &smimeCaps]
}

-- KEY-DERIVATION
--
-- Describes the basic properties of a key derivation algorithm
--
-- &id - contains the OID identifying the key derivation algorithm
-- &Params - contains the type for the algorithm parameters,
-- if present; absent implies no parameters
-- &paramPresence - parameter presence requirement
-- &smimeCaps - contains the object describing how the S/MIME
-- capabilities are presented.
--
-- Could add information about defaults for the derivation algorithm
-- such as PRFs
--
-- Example:
-- pbkdf2 KEY-DERIVATION ::= {
--   IDENTIFIER id-PBKDF2
--   PARAMS TYPE PBKDF2-params ARE required
-- }

KEY-DERIVATION ::= CLASS {
  &id OBJECT IDENTIFIER UNIQUE,
  &Params OPTIONAL,
  &paramPresence ParamOptions DEFAULT absent,
  &smimeCaps SMIME-CAPS OPTIONAL
} WITH SYNTAX {
  IDENTIFIER &id
  [PARAMS [TYPE &Params] ARE &paramPresence]
  [SMIME-CAPS &smimeCaps]
}

-- MAC-ALGORITHM
--
-- Describes the basic properties of a MAC algorithm
--
-- &id - contains the OID identifying the MAC algorithm
-- &Params - contains the type for the algorithm parameters,
-- if present; absent implies no parameters
-- &paramPresence - parameter presence requirement
-- &keyed - MAC algorithm is a keyed MAC algorithm
-- &smimeCaps - contains the object describing how the S/MIME
-- capabilities are presented.
--
-- It would make sense to also add minimum and maximum MAC lengths
--
-- Example:
-- maca-hmac-sha1 MAC-ALGORITHM ::= {
--   IDENTIFIER hMAC-SHA1
--   PARAMS TYPE NULL ARE preferredAbsent
--   IS KEYED MAC TRUE
--   SMIME-CAPS {IDENTIFIED BY hMAC-SHA1}
-- }

Hoffman & Schaad Expires September 8, 2010 [Page 15]
MAC-ALGORITHM ::= CLASS {
  &id OBJECT IDENTIFIER UNIQUE,
  &Params OPTIONAL,
  &paramPresence ParamOptions DEFAULT absent,
  &keyed BOOLEAN,
  &smimeCaps SMIME-CAPS OPTIONAL
} WITH SYNTAX {
  IDENTIFIER &id
  [PARAMS [TYPE &Params] [ARE &paramPresence]]
  IS-KEYED-MAC &keyed
  [SMIME-CAPS &smimeCaps]
}

-- CONTENT-ENCRYPTION
--
-- Describes the basic properties of a content encryption algorithm
--
-- &id - contains the OID identifying the content encryption algorithm
--&Params - contains the type for the algorithm parameters,
--  if present; absent implies no parameters
--&paramPresence - parameter presence requirement
--&smimeCaps - contains the object describing how the S/MIME capabilities are presented.
--
-- Example:
--cea-3DES-cbc CONTENT-ENCRYPTION ::= {
--  IDENTIFIER des-ede3-cbc
--  PARAMS TYPE IV ARE required
--  SMIME-CAPS { IDENTIFIED BY des-ede3-cbc }
--}

CONTENT-ENCRYPTION ::= CLASS {
  &id OBJECT IDENTIFIER UNIQUE,
  &Params OPTIONAL,
  &paramPresence ParamOptions DEFAULT absent,
  &smimeCaps SMIME-CAPS OPTIONAL
} WITH SYNTAX {
  IDENTIFIER &id
  [PARAMS [TYPE &Params] ARE &paramPresence]
  [SMIME-CAPS &smimeCaps]
}

-- ALGORITHM
--
-- Describes a generic algorithm identifier
--
ALGORITHM ::= CLASS {
  &id OBJECT   IDENTIFIER UNIQUE,
  &Params      OPTIONAL,
  &paramPresence ParamOptions DEFAULT absent,
  &smimeCaps   SMIME-CAPS OPTIONAL
} WITH SYNTAX {
  IDENTIFIER &id
  [PARAMS [TYPE &Params] ARE &paramPresence]
  [SMIME-CAPS &smimeCaps]
}

AlgorithmIdentifier

-- Provides the generic structure that is used to encode algorithm
-- identification and the parameters associated with the
-- algorithm.
--
-- The first parameter represents the type of the algorithm being
-- used.
-- The second parameter represents an object set containing the
-- algorithms that may occur in this situation.
-- The initial list of required algorithms should occur to the
-- left of an extension marker, all other algorithms should
-- occur to the right of an extension marker.
--
-- The object class ALGORITHM can be used for generic unspecified
-- items.
-- If new ALGORITHM objects are defined, the fields &id and &Params
-- need to be present as field in the object.
--
AlgorithmIdentifier{ALGORITHM-TYPE, ALGORITHM-TYPE:AlgorithmSet} ::= SEQUENCE {
  algorithm ALGORITHM-TYPE.&id({AlgorithmSet}),
  parameters ALGORITHM-TYPE.
    &Params({AlgorithmSet}@algorithm) OPTIONAL
}
-- S/MIME Capabilities
--
-- We have moved the SMIME-CAPS from the module for RFC 3851 to here
-- because it is used in the PKIX document RFC 4262 - Use of S/MIME
-- Caps in certificate extension
--
-- This class is used to represent an S/MIME capability. S/MIME
-- capabilities are used to represent what algorithm capabilities
-- an individual has. The classic example was the content encryption
-- algorithm RC2 where the algorithm id and the RC2 key lengths
-- supported needed to be advertised, but the IV used is not fixed.
-- Thus for RC2 we used
--
-- cap-RC2CBC SMIME-CAPS ::= {
  -- TYPE INTEGER ( 40 | 128 ) IDENTIFIED BY rc2-cbc }
--
-- where 40 and 128 represent the RC2 key length in number of bits.
--
-- Another example where information needs to be shown is for
-- RSA-OAEP where only specific hash functions or mask generation
-- functions are supported, but the saltLength is specified by the
-- sender and not the recipient. In this case one can either
-- generate a number of capability items,
-- or a new S/MIME capability type could be generated where
-- multiple hash functions could be specified.
--
-- SMIME-CAP
--
-- This class is used to associate the type describing capabilities
-- with the object identifier.
--

SMIME-CAPS ::= CLASS {
  &id OBJECT IDENTIFIER UNIQUE,
  &Type OPTIONAL
}
WITH SYNTAX { [TYPE &Type] IDENTIFIED BY &id }

--
-- Generic type - this is used for defining values.
--
-- Define a single S/MIME capability encoding
SMIMECapability{SMIME-CAPS:CapabilitySet} ::= SEQUENCE {
  capabilityID        SMIME-CAPS.&id({CapabilitySet}),
  parameters          SMIME-CAPS.&Type({CapabilitySet}
                           @{capabilityID}) OPTIONAL
}

-- Define a sequence of S/MIME capability value

SMIMECapabilities { SMIME-CAPS:CapabilitySet } ::= 
  SEQUENCE SIZE (1..MAX) OF SMIMECapability{"CapabilitySet"}

END

  ...
} OPTIONAL,

...
OPTIONAL

], ... }

-- Version, Time, CertificateSerialNumber, and Extensions were
-- defined earlier for use in the certificate structure

--
-- The two object sets below should be expanded to include
-- those algorithms which are supported by the system.
--
-- For example:
-- SignatureAlgorithms SIGNATURE-ALGORITHM ::= {
--    PKIXAlgs-2009SignatureAlgs, ..., 
--    -- RFC 3279 provides the base set
--    PKIX1-PSS-OAEP-ALGORITHMS.SignatureAlgs |
--    -- RFC 4055 provides extension algs
--    OtherModule.SignatureAlgs
--    -- RFC XXXX provides additional extension algs
-- }

SignatureAlgorithms SIGNATURE-ALGORITHM ::= {
    PKIXAlgs-2008SignatureAlgs, ..., 
    PKIX1-PSS-OAEP-Algorithms-2009SignatureAlgs }

PublicKeyAlgorithms PUBLIC-KEY ::= {
    PKIXAlgs-2009PublicKeys, ..., 
    PKIX1-PSS-OAEP-Algorithms-2009PublicKeys }

-- Upper Bounds

ub-state-name INTEGER ::= 128
ub-organization-name INTEGER ::= 64
ub-organizational-unit-name INTEGER ::= 64
ub-title INTEGER ::= 64
ub-serial-number INTEGER ::= 64
ub-pseudonym INTEGER ::= 128
ub-emailaddress-length INTEGER ::= 255
ub-locality-name INTEGER ::= 128
ub-common-name INTEGER ::= 64
ub-name INTEGER ::= 32768

-- Note - upper bounds on string types, such as TeletexString, are
-- measured in characters. Excepting PrintableString or IA5String, a
-- significantly greater number of octets will be required to hold
-- such a value. As a minimum, 16 octets, or twice the specified
-- upper bound, whichever is the larger, should be allowed for
-- TeletexString. For UTF8String or UniversalString at least four
-- times the upper bound should be allowed.
-- Information object classes used in the definition
-- of certificates and CRLs

-- Parameterized Type SIGNED
--
-- Three different versions of doing SIGNED:
-- 1. Simple and close to the previous version
--
-- SIGNED{ToBeSigned} ::= SEQUENCE {
--   toBeSigned  ToBeSigned,
--   algorithm   AlgorithmIdentifier{SIGNATURE-ALGORITHM,
--     {SignatureAlgorithms}},
--   signature   BIT STRING
-- }

-- 2. From Authenticated Framework
--
-- SIGNED{ToBeSigned} ::= SEQUENCE {
--   toBeSigned        ToBeSigned,
--   COMPONENTS OF SIGNATURE{ToBeSigned}
-- }
-- SIGNATURE{ToBeSigned} ::= SEQUENCE {
--   algorithmIdentifier   AlgorithmIdentifier,
--   encrypted             ENCRYPTED-HASH{ToBeSigned}
-- }
-- ENCRYPTED-HASH{ToBeSigned} ::= 
--   BIT STRING
--   (CONSTRAINED BY {
--     shall be the result of applying a hashing procedure to
--     the DER-encoded (see 6.1) octets of a value of
--     ToBeSigned and then applying an encipherment procedure
--     to those octets
--   })

-- 3. A more complex version, but one that automatically ties
-- together both the signature algorithm and the
-- signature value for automatic decoding.
--
-- SIGNED{ToBeSigned} ::= SEQUENCE {
--   toBeSigned           ToBeSigned,
--   algorithmIdentifier  SEQUENCE {
--     algorithm        SIGNATURE-ALGORITHM.
--     &id({SignatureAlgorithms}),
--     parameters       SIGNATURE-ALGORITHM.
--     &Params({SignatureAlgorithms}
--            {algorithmIdentifier.algorithm})
--   },
--
signature BIT STRING (CONTAINING SIGNATURE-ALGORITHM.&Value(
    {SignatureAlgorithms}
    {@algorithmIdentifier.algorithm}))

-- Note - upper bounds on string types, such as TeletexString, are
-- measured in characters.  Excepting PrintableString or IA5String, a
-- significantly greater number of octets will be required to hold
-- such a value.  As a minimum, 16 octets, or twice the specified
-- upper bound, whichever is the larger, should be allowed for
-- TeletexString.  For UTF8String or UniversalString at least four
-- times the upper bound should be allowed.

END

15. IANA Considerations

There are no IANA actions needed for this document.

16. Security Considerations

Even though all the RFCs in this document are security-related, the
document itself does not have any security considerations. The ASN.1 modules keep the same bits-on-the-wire as the modules that they replace.

17. Normative References

Appendix A.  Change History

[[ This entire section is to be removed upon publication. ]]

A.1.  Changes between draft-hoffman-pkix-new-asn1-00 and
draft-ietf-pkix-new-asn1-00

Changed the draft name.

Added the PKIX common definitions module.

Added RFC 4055.

Made RFC-to-be 5055 into RFC 5055.

In RFC 2560, there was an error. Changed from "id-pkix-octsp OBJECT
IDENTIFIER ::= { id-ad-octsp }" to "id-pkix-octsp OBJECT IDENTIFIER ::= id-ad-octsp".

In RFC 3280, made the DirectoryString definition match the order and
spelling of that of X.520.

In the imports of the RFC 3280 implicit module, the DirectoryString
type is now SIGNED{} because it is a parameterized type.

In the imports of the RFC 3281 module, the SIGNED type is now
SIGNED{} because it is a parameterized type.

Combined the two modules for RFC 3280 (explicit and implicit) into
one section.

A.2. Changes between draft-ietf-pkix-new-asn1-00 and -01

Added module for algorithm classes and modified RFC 3279 ASN.1 to use the classes defined.

A.3. Changes between draft-ietf-pkix-new-asn1-01 and -02

Added design notes.

Removed issue on "Algorithm Structure" and "More Modules To Be Added".

Updated all modules to use objects more deeply.

Removed RFC 3280 and added RFC 5280.

Added RFC 5272 (CMC).

A.4. Changes between draft-ietf-pkix-new-asn1-02 and -03

Many cosmetic-only changes to the modules.

Changed some multi-word keywords to hyphenated (such as "SMIME CAPS" to "SMIME-CAPS").

In section 6, added "Note that this module also contains information from RFC-to-be 5480." Will add a real reference in future version of this draft.

In section 6, added the labels for the id-keyExchangeAlgorithm OID.

Updated the reference of X.680 to X.680, X.681, X.682, and X.683.

A.5. Changes between draft-ietf-pkix-new-asn1-03 and -04

Changed the status of the document.

In PKIX-CommonTypes, replaced "ExtensionSet" with "Extensions". This affected many other modules that use PKIX-CommonTypes.

In RFC 5055, changed swb-pkc-cert from "{INTEGER IDENTIFIED BY id-swb-pkc-cert }" to "{ Certificate IDENTIFIED BY id-swb-pkc-cert }", and changed swb-ac-cert from "{INTEGER IDENTIFIED BY id-swb-ac-cert }" to "{ AttributeCertificate IDENTIFIED BY id-swb-ac-cert }". 
A.6. Changes between draft-ietf-pkix-new-asn1-04 and -05

Removed the "Issues" section from section 1, which should have been
done in the last draft.

A.7. Changes between draft-ietf-pkix-new-asn1-05 and -06

Minor nits to keep the nits checker happy.

A.8. Changes between draft-ietf-pkix-new-asn1-06 and -07

In the AlgorithmInformation module, there was an error in a
commented-out example. Changed "-- HASHES {sha1 | md5, ... }" to "--
HASHES { mda-sha1 | mda-md5, ... }".

In the module for RFC 3279, changed from:

ECParameters ::= CHOICE {
  namedCurve CURVE.&id({NamedCurve}),
  implicitCurve NULL
  -- specifiedCurve SpecifiedCurve
  -- specifiedCurve MUST NOT be used in PKIX
  -- Details for specifiedCurve can be found in [X9.62]
  -- Any future additions to this CHOICE should be coordinated
  -- with ANSI X.9.
}

to:

ECParameters ::= CHOICE {
  namedCurve CURVE.&id({NamedCurve}) --,
  implicitCurve NULL
  -- implicitCurve MUST NOT be used in PKIX
  -- specifiedCurve SpecifiedCurve
  -- specifiedCurve MUST NOT be used in PKIX
  -- Details for specifiedCurve can be found in [X9.62]
  -- Any future additions to this CHOICE should be coordinated
  -- with ANSI X.9.
}

-- If you need to be able to decode ANSI X.9 parameter structures, then
-- uncomment the implicitCurve and specificCurve above, and also
-- uncomment the follow:
--(WITH COMPONENTS {namedCurve PRESENT})

Changed "memberBody" to "member-body" in the modules for RFCs 4210
and 4211.
A.9. Changes between draft-ietf-pkix-new-asn1-06 and -07

Throughout, changed all instances of RFC 3281 to RFC 5755.

Throughout, fixed spelling errors in module comments and parameter names.

In section 1, added "Also note that the ASN.1 modules in this document have references in their text comments that need to be looked up in original RFCs, and that some of those references may have already been superseded by later RFCs."

In RFC 5272, fixed the OID for EnrollmentMessageSyntax.

In section 6, changed "RFC-to-be 5480" to "RFC 5480" and added a reference for it.
