1. Introduction

RFC 3278 describes how to use Elliptic Curve Cryptography (ECC) public-key algorithms in the Cryptographic Message Syntax (CMS). This document updates RFC 3278 to add support for the SHA2 family of hash algorithms, Elliptic Curve Digital Signature Algorithm (ECDSA) 224-512, and Key Derivation Functions (KDFs) that utilize SHA2 algorithms.

1.1. Overview of Changes to RFC 3278

The following summarizes the changes:

- Paragraph 2.1.1 limited the digest algorithm to SHA-1. This document expands the allowed algorithms to SHA-224, SHA-256, SHA-384, and SHA-512.
- Paragraph 3.1.1 used SHA1 in the KDF with ECDH std and cofactor methods. This document expands the set of allowed algorithms by adding SHA-224, SHA-256, SHA-384, and SHA-512.

- Paragraph 3.1.2 used SHA1 in the KDF with ECMQV. This document expands the set of allowed algorithms by adding SHA-224, SHA-256, SHA-384, and SHA-512.

- Paragraph 5 is updated to include requirements for hash algorithms and recommendations for matching curves and hash algorithms. It also was expanded to indicate which ECDH and ECMQV variants are required.

- Paragraph 7 is updated to include S/MIME capabilities for ECDSA with SHA-224, SHA-256, SHA-384, and SHA-512. It was also updated to include S/MIME capabilities for ECDH and ECMQV using SHA2 algorithms as the KDF.

- Paragraph 8.1 listed the algorithm identifiers for SHA-1 and SHA-1 with ECDSA. This document adds algorithm identifiers for SHA-224, SHA-256, SHA-384, and SHA-512 as well as SHA-224, SHA-256, SHA-384, and SHA-512 with ECDSA. This document also updates the list of algorithm identifiers for ECDH std, ECDH cofactor, and ECMQV with SHA2 algorithms as the KDF.

- Paragraph 9 references need to be updated.

- Added ASN.1 module.

- Security considerations paragraph referring to definitions of SHA-224, SHA-256, SHA-384, and SHA-512 needs to be deleted.
