Prohibiting RC4 Cipher Suites
draft-popov-tls-prohibiting-rc4-02

Abstract

This document requires that Transport Layer Security (TLS) clients
and servers never negotiate the use of RC4 cipher suites when they
establish connections.

Status of This Memo

This Internet-Draft is submitted in full conformance with the
provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering
Task Force (IETF). Note that other groups may also distribute
working documents as Internet-Drafts. The list of current Internet-
Drafts is at http://datatracker.ietf.org/drafts/current/.

Internet-Drafts are draft documents valid for a maximum of six months
and may be updated, replaced, or obsoleted by other documents at any
time. It is inappropriate to use Internet-Drafts as reference
material or to cite them other than as "work in progress."

This Internet-Draft will expire on October 13, 2014.

the Trust Legal Provisions and are provided without warranty as
described in the Simplified BSD License.
1. Introduction

RC4 is a stream cipher described in [SCH], which is widely supported, and often preferred, by TLS servers. However, RC4 has long been known to have a variety of cryptographic weaknesses, e.g. [PAU], [MAN], [FLU]. Recent cryptanalysis results [ALF] exploit biases in the RC4 keystream to recover repeatedly encrypted plaintexts.

These recent results are on the verge of becoming practically exploitable; currently they require $2^{26}$ sessions or $13 \times 2^{30}$ encryptions. As a result, RC4 can no longer be seen as providing a sufficient level of security for TLS sessions.

This document requires that TLS ([RFC5246], [RFC4346], [RFC2246]) clients and servers never negotiate the use of RC4 cipher suites.

1.1. Requirements Language

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [RFC2119].

2. Changes to TLS

Because of the deficiencies noted in Section 1:

- TLS clients MUST NOT include RC4 cipher suites in the ClientHello message.

- TLS servers MUST NOT select an RC4 cipher suite when a TLS client sends such a cipher suite in the ClientHello message.
o If the TLS client only offers RC4 cipher suites, the TLS server
    MUST terminate the handshake. The TLS server MAY send the
    insufficient_security fatal alert in this case.

Appendix A lists the RC4 cipher suites defined for TLS.

3. Acknowledgements

This document was inspired by discussions with Magnus Nystrom, Eric
Rescorla, Joseph Salowey, Yaron Sheffer, Nagendra Modadugu and others
on the TLS mailing list.

4. IANA Considerations

This memo includes no request to IANA.

5. Security Considerations

This document helps maintain the security guarantees of the TLS
protocol by prohibiting the use of the RC4-based cipher suites
(listed in Appendix A), which do not provide a sufficiently high
level of security.

    conference/usenixsecurity13/security-rc4-tls>.
Appendix A.  RC4 Cipher Suites

The following cipher suites defined for TLS use RC4:

- TLS_RSA_WITH_RC4_128_MD5
- TLS_RSA_WITH_RC4_128_SHA
- TLS_DH_anon_WITH_RC4_128_MD5
- TLS_RSA_EXPORT_WITH_RC4_40_MD5
- TLS_DH_anon_EXPORT_WITH_RC4_40_MD5
