Abstract

This document defines a YANG data model that can be used to configure and manage Internet Group Management Protocol (IGMP) or Multicast Listener Discovery (MLD) proxy devices. The YANG module in this document conforms to Network Management Datastore Architecture (NMDA).

Status of this Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

The list of current Internet-Drafts can be accessed at http://www.ietf.org/ietf/1id-abstracts.txt
The list of Internet-Draft Shadow Directories can be accessed at http://www.ietf.org/shadow.html

This Internet-Draft will expire on January 02, 2020.

1. Introduction

This document defines a YANG [RFC6020] data model for the management of Internet Group Management Protocol (IGMP) or Multicast Listener Discovery (MLD) proxy devices.

The YANG module in this document conforms to the Network Management Datastore Architecture defined in [RFC8342]. The "Network Management Datastore Architecture" (NMDA) adds the ability to inspect the current operational values for configuration, allowing clients to use identical paths for retrieving the configured values and the operational values.

1.1. Terminology

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "NOT RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in BCP 14 [RFC2119].

The terminology for describing YANG data models is found in [RFC6020].

1.2. Tree Diagrams

A simplified graphical representation of the data model is used in this document. The meaning of the symbols in these diagrams is as follows:

- Brackets "[" and "]" enclose list keys.
- Abbreviations before data node names: "rw" means configuration (read-write), and "ro" means state data (read-only).
- Symbols after data node names: "?" means an optional node, "!" means a presence container, and "*" denotes a list and leaf-list.
- Parentheses enclose choice and case nodes, and case nodes are also marked with a colon (":").
- Ellipsis ("...") stands for contents of subtrees that are not shown.

2. Design of Data Model

The model covers Considerations for Internet Group Management Protocol (IGMP) / Multicast Listener Discovery (MLD) - Based Multicast Forwarding ("IGMP/MLD Proxying") [RFC4605].
The goal of this document is to define a data model that provides a common user interface to IGMP/MLD proxy. This document provides freedom for vendors to adapt this data model to their product implementations.

2.1. Overview

The IGMP/MLD proxy YANG module defined in this document has all the common building blocks for the IGMP/MLD proxy protocol.

The YANG module augments /rt:routing/rt:control-plane-protocols/rt:control-plane-protocol to enable IGMP/MLD proxy and configure other related parameters.

This YANG module follows the Guidelines for YANG Module Authors (NMDA) [draft-dsdt-nmda-guidelines-01]. This NMDA ("Network Management Datastore Architecture") architecture provides an architectural framework for datastores as they are used by network management protocols such as NETCONF [RFC6241], RESTCONF [RFC8040] and the YANG [RFC7950] data modeling language.

2.2. Augment /rt:routing/rt:control-plane-protocols/rt:control-plane-protocol

The YANG module augments /rt:routing/rt:control-plane-protocols/rt:control-plane-protocol to enable IGMP/MLD proxy under the upstream interface. There is also a constraint to make sure the upstream interface for IGMP/MLD proxy should not be configured PIM.

module: ietf-igmp-mld-proxy
augment /rt:routing/rt:control-plane-protocols/rt:control-plane-protocol:
  +--rw igmp-proxy {feature-igmp-proxy}?
    +--rw interfaces
      +--rw interface* [interface-name]
      +--rw interface-name if:interface-ref
      +--rw version? uint8
      +--rw enable? boolean
      +--ro group* [group-address]
        +--ro group-address inet:ipv4-address
        +--ro up-time? uint32
        +--ro filter-mode? enumeration
      +--ro source* [source-address]
        +--ro source-address inet:ipv4-address
        +--ro up-time? uint32
        +--ro filter-mode? enumeration
        +--ro downstream-interface* [interface-name]
          +--ro interface-name if:interface-ref
          +--ro filter-mode? enumeration
augment /rt:routing/rt:control-plane-protocols/rt:control-plane-protocol:
  +--rw mld-proxy {feature-mld-proxy}?
    +--rw interfaces
      +--rw interface* [interface-name]
        +--rw interface-name    if:interface-ref
        +--rw version?          uint8
        +--rw enable?           boolean
      +--ro group* [group-address]
        +--ro group-address    inet:ipv6-address
        +--ro up-time?         uint32
        +--ro filter-mode?     enumeration
      +--ro source* [source-address]
        +--ro source-address    inet:ipv6-address
        +--ro up-time?          uint32
        +--ro filter-mode?      enumeration
        +--ro downstream-interface* [interface-name]
          +--ro interface-name    if:interface-ref
          +--ro filter-mode?      enumeration

4. Security Considerations

The YANG module specified in this document defines a schema for data that is designed to be accessed via network management protocols such as NETCONF [RFC6241] or RESTCONF [RFC8040]. The lowest NETCONF layer is the secure transport layer, and the mandatory-to-implement secure transport is Secure Shell (SSH) [RFC6242]. The lowest RESTCONF layer is HTTPS, and the mandatory-to-implement secure transport is TLS [RFC5246].

The NETCONF access control model [RFC6536] provides the means to restrict access for particular NETCONF or RESTCONF users to a preconfigured subset of all available NETCONF or RESTCONF protocol operations and content.

There are a number of data nodes defined in this YANG module that are writable/creatable/deletable (i.e., config true, which is the default). These data nodes may be considered sensitive or vulnerable in some network environments. Write operations (e.g., edit-config) to these data nodes without proper protection can have a negative effect on network operations. These are the subtrees and data nodes and their sensitivity/vulnerability:

/rt:routing/rt:control-plane-protocols/rt:control-plane-protocol

Unauthorized access to any data node of these subtrees can adversely affect the IGMP/MLD proxy subsystem of both the local device and the network. This may lead to network malfunctions, delivery of packets to inappropriate destinations, and other problems.

Some of the readable data nodes in this YANG module may be considered sensitive or vulnerable in some network environments. It is thus
important to control read access (e.g., via get, get-config, or notification) to these data nodes. These are the subtrees and data nodes and their sensitivity/vulnerability:

/rt:routing/rt:control-plane-protocols/rt:control-plane-protocol

Unauthorized access to any data node of these subtrees can disclose the operational state information of IGMP/MLD proxy on this device.

5. IANA Considerations

RFC Ed.: In this section, replace all occurrences of ’XXXX’ with the actual RFC number (and remove this note).

This document registers the following namespace URIs in the IETF XML registry [RFC3688]:

--------------------------------------------------------------------
Registrant Contact: The IESG.
XML: N/A, the requested URI is an XML namespace.
--------------------------------------------------------------------

This document registers the following YANG modules in the YANG Module Names registry [RFC7950]:

--------------------------------------------------------------------
name:         ietf-igmp-mld-proxy
prefix:       imp
reference:    RFC XXXX
--------------------------------------------------------------------
