IANA Considerations for Connectivity Fault Management (CFM) Code Points

Abstract

IEEE 802.1 has specified Connectivity Fault Management (CFM) Operations, Administration, and Maintenance (OAM) facilities. CFM messages are structured with an OpCode field and have provision for the inclusion of TLV-structured information. IEEE 802.1 has allocated blocks of CFM OpCodes and TLV Types to the IETF. This document specifies the IANA considerations for the assignment of values from these blocks.

Status of This Memo

This memo documents an Internet Best Current Practice.

This document is a product of the Internet Engineering Task Force (IETF). It represents the consensus of the IETF community. It has received public review and has been approved for publication by the Internet Engineering Steering Group (IESG). Further information on BCPs is available in Section 2 of RFC 5741.

Information about the current status of this document, any errata, and how to provide feedback on it may be obtained at http://www.rfc-editor.org/info/rfc7319.

1. Introduction

The IEEE 802.1 Working Group has specified Connectivity Fault Management (CFM) [802.1Q] OAM [RFC6291] facilities. CFM messages are structured with an OpCode field and have provision for the inclusion of TLV-structured information.

IEEE 802.1 has allocated the block of 32 CFM OpCodes from 64 through 95 and the block of 32 CFM TLV Types from 64 through 95 to the IETF (see Appendix A). This document specifies the IANA considerations for the assignment of values from these two blocks.

IEEE 802.1 previously allocated similar blocks of values from 32 through 63 to ITU-T [Y.1731].

1.1. Terminology

Capitalized IANA terms such as "Standards Action" are to be interpreted as described in [RFC5226].

2. IANA Considerations

IANA has created the "Connectivity Fault Management (CFM) OAM IETF Parameters" registry with the following two subregistries:

Registry Name: CFM OAM IETF OpCodes

Registration Procedures: Standards Action

Reference: [802.1Q] [RFC7319]

Note: This parameter originates with the IEEE 802.1 Working Group that has allocated the block of values from 64 to 95 to the IETF.

<table>
<thead>
<tr>
<th>Value</th>
<th>Assignment</th>
</tr>
</thead>
<tbody>
<tr>
<td>64-95</td>
<td>Unassigned</td>
</tr>
</tbody>
</table>
IANA Considerations for CFM Code Points

Registry Name: CFM OAM IETF TLV Types

Registration Procedures: Standards Action

Reference: [802.1Q] [RFC7319]

Note: This parameter originates with the IEEE 802.1 Working Group that has allocated the block of values from 64 to 95 to the IETF.

</thead>
<tbody>
<tr>
<td>64-95</td>
<td>Unassigned</td>
</tr>
</tbody>
</table>

3. Security Considerations

This document is concerned with assignment of values from the blocks of IEEE 802.1 CFM OpCodes and TLV Types that the IEEE 802.1 Working Group has allocated to the IETF. It is not directly concerned with security.

Appendix A.  IEEE 802.1 WG Liaison

To:         Jari Arkko, IETF chair
cc:         Stephen J. Trowbridge, ITU-T SG15 chair,
            Donald Eastlake, Erik Nordmark, IETF TRILL WG,
            Eric Gray, IETF/IEEE liaison

From:       Tony Jeffree, IEEE 802.1 WG Chair

Date:       Thursday, 06 March 2014

Reference:  24 September 2013 Liaison from TRILL WG

After considering the referenced liaison from the TRILL WG, IEEE
802.1 has voted to approve the allocation of code points from the
Connectivity Fault Management protocol of IEEE Std 802.1Q(TM)-2011
for use by IETF. The expectation of IEEE 802.1 is that these code
points will be allocated through IANA only on the basis of IETF
standards actions. Specifically, the allocation includes:

+ 32 CFM OpCode Field values. Reference IEEE Std 802.1Q-2011
  Clause 21.4.3, Table 21-4. The OpCode Field values 64-95
  are allocated to the IETF.

+ 32 TLV Type Field values. Reference IEEE Std 802.1Q-2011
  Clause 21.5.1.1, Table 21-6. The Type Field values 64-95
  are allocated to the IETF.

IEEE Std 802.1Q will be revised at some future date to document
this allocation. In the meantime, the allocation will be recorded
through the IEEE 802.1 maintenance process.

Regards,

Tony Jeffree
IEEE 802.1 Working Group Chair
